Wahlstrom, V'94**, is the recipient of the Mrs. Jack L. Billhardt Dean's Scholarship. The Bruce J. Heim Dean's Scholarship was awarded to **Amy L. Dowd, V'93**.

Newly Established Foundation Supports the Vet School

Mr. and Mrs. John A. McCrane, clients of New Bolton Center and the Small Animal Hospital, established a private foundation earlier this year to support animal welfare, the arts, family and children's services, and conservation. The School of Veterinary Medicine is among the first beneficiaries of the McCrane Foundation's largesse.

In October the McCrane Foundation made two gifts to the School of Veterinary Medicine. One grant for \$15,000 will purchase a cardiac output computer for the Intensive Care Unit at VHUP. Although this piece of equipment is routinely used in human medicine to measure cardiovascular status, only one other veterinary hospital uses a cardiac output computer for clinical patients, and only on occasion. VHUP's will be used routinely several times a week.

The second grant for \$20,000 will purchase specialized video equipment for the high speed treadmill at New Bolton Center. It will be used to standardize looking at ways both lame and sound horses travel while in motion and for a broad spectrum of other projects in Equine Sports Medicine.

Dean Edwin J. Andrews and Dr. Harry Rozmiarek, director of ULAR, cut the ribbon to the new University Laboratory Animal Resources facility on the second floor of the Veterinary Quadrangle Building.

The facility includes a sterile two-operating-room suite equipped with vacuum and central oxygen; kennel rooms with 23 runs with automatic feeders and waterers; a treatment room, quarantine space, and two rooms for cats. The facility exceeds federal requirements for animal housing and is part of the University's program to upgrade all animal care and use facilities on campus.

The renovations were funded by grants from the University Research Development Fund and the National Institutes of Health.
