

Target journal: Journal of Neuroscience

Working title: Gene expression profiling of cholinergic neurons from basal forebrain help identify novel sleep-wake regulating pathways

Authors: Nikonova EV1*, Gilliland J2*, Tanis KQ1 , Podtelezchnikov AA1, Rigby AM3, Galante RJ2, Finney EM1, Stone DJ1, Renger JJ3, Pack AI2*□ and Winrow CJ3*□

UPenn contact: Dr. Allan Pack, Center for Sleep and Circadian Neurobiology, pack@mail.med.upenn.edu

List of Supplemental Materials (to be submitted upon acceptance):

- Chat-eGFP (-)/Chat-eGFP (+)/white matter ANOVA set (LCM)
- Chat-eGFP (+) light on/off ANOVA set (LCM)
- Chat-eGFP(+) sleep deprivation and time ANOVA set (LCM)
- Chat-eGFP (+) protein folding gene enrichment set from sleep deprivation signature (LCM)
- Validation of non-invasive methodology of sleep scoring in Swiss Webster mice (CFW)
