Patent Ductus Arteriosus Surgery in Dogs

Weighing 490 to 3200 Grams

by

James W. Buchanan, D.V.M., Donald F. Patterson, D.V.M.

and Lawrence R. Soma, V.M.D., Philadelphia, Pa.

Summary: A continuous murmur caused by a large patent ductus arteriosus was detected in a puppy at 8 days of age. Because of recurrent bouts of congestive heart failure, the lesion was corrected at 4 weeks of age when the animal weighed 490 grams. One postoperative death occurred out of 8 other dogs weighing 3.2 kg. or less in which a patent ductus arteriosus was ligated or divided.

Jr. Thor. and Cardiovas. Surg.; Manuscript submitted.
