State Leadership Development Policies An Analysis of 50 States and Territories

Abstract

State education systems to support leadership development have received relatively scant attention and resources, despite the demonstrated importance of leadership to school improvement. This need spurred the [National Association of State Boards of Education \(NASBE\)](#) to form a study group with its members and partner with the [Consortium for Policy Research in Education \(CPRE\)](#) to examine the problem from a state policy perspective; to offer a framework, guidance, and resources to help states develop and keep effective leaders; provide examples of practices for states; and share insights from partner organizations. The report, *Successful Leaders for Successful Schools: Building and Maintaining a Quality Workforce*, details findings that emerged from this work. As a companion piece to this work, *State Leadership Development Policies -An Analysis of 50 States and Territories*, presents a comprehensive picture of school leadership development policies across all 50 states and US territories. CPRE Researchers **Bobbi Newman**, **Jonathan Supovitz**, and **Greg Collins**, in collaboration with NASBE's **Robert Hull** and **Stephen Prociw**, produced an interactive report that seeks to operationalize the framework developed for state education agencies to improve the school leadership pipeline.

Researchers interviewed state board members and staff members from state education agencies to learn about their states' school leadership development policies and practices. Data collection questions focused on identifying the organizational and individual supports that states have established. *State Leadership Development Policies -An Analysis of 50 States and Territories* provides a wealth of information for state leaders interested in learning about a sample of each state's policies and programs that support the school leadership pipeline.

State Leadership Development Policies

An Analysis of 50 States and Territories

Introduction

State systems to support leadership development have received relatively scant attention and resources, despite the demonstrated importance of leadership to school improvement. This need spurred the National Association of State Boards of Education (NASBE) to partner with the Consortium for Policy Research in Education (CPRE) to examine the problem from a state policy perspective; to offer a framework, guidance, and resources to help states develop and keep effective leaders; provide examples of practices for states; and share insights from partner organizations. The report, *Successful Leaders for Successful Schools: Building and Maintaining a Quality Workforce*, details findings that emerged from this work.

To guide state boards of education (SBEs) as they consider policy actions around leadership development, NASBE study group members in concert with CPRE developed the State-Level Policy Development Framework (see figure). The framework is a conceptual way of thinking about policy development. It is intended to help state board members identify the levers and processes that their board needs to consider for sound policymaking and the method for achieving action around the key levers. The framework is anchored in leadership standards and supported by data monitoring of the leadership development process for school leaders.

Once a state board has established strong leadership standards, the work of implementation begins. Leadership standards are operationalized in two forms: organizational and individual supports. Support for the operationalization of standards comes in two forms. First, states may develop a set of organizational supports for leadership standards, which include a range of systems and structures to facilitate leadership development (the left side of the framework). Second, states may develop a set of supports to facilitate the capacity building of individual leaders (the right side).

Organizational supports are systems and structures that facilitate leadership development: program approval, licensure, partnerships, and sponsorships. Program approval and licensure articulate a pathway for individuals to enter

the educational leadership workforce. Program approval and licensure are inextricably linked, in that most SBEs establish both the approval process for institutional programs that prepare leaders and the licensure requirements for leaders.

It is essential that the leadership standards form the basis of preparation programs and the licensure process. Partnerships and sponsorships provide the conduit through which candidates can better access those pathways.

Individual supports are distinct from organizational supports in that they are direct services to future and current school leaders. States may develop educational leaders by recruiting professionals into the field, by developing their own leadership preparation programs, and by making decisions to license and/or certify individual leaders. States may also directly support current or future leaders through the direct delivery of capacity-building experiences. They may build mechanisms to directly evaluate individual educational leaders. The small circle within the framework serves as a reminder of the interrelationship of certification, professional learning, and evaluation.

Finally, data should guide a coherent state leadership development system. To that end, states should collect and analyze a range of data indicators of leadership preparation and practice to track ongoing improvement of leadership capacity. State longitudinal data systems and data warehousing sources in each state are rich sources of information. Two primary data sets should be considered. First, data on student populations and migrations will inform boards of where leaders will be needed. Second, information on current licensure applications and program enrollment will indicate where current and future leaders are located.

This document seeks to operationalize the framework with data collected from a comprehensive study of school leadership development policies across all 50 states and US territories. Researchers from CPRE, in collaboration with NASBE, interviewed state board members and staff members from state education agencies to learn about their states' school leadership development policies and practices. Data collection questions focused on identifying the organizational and individual supports that states have established.

Findings revealed that certain states have started work in these areas,

With the passage of the Every Student Succeeds Act in 2015, states are encouraged to continue to develop both organizational and individual supports needed to develop leadership capacity.

CPRE/NASBE 9/15/15

exemplified in a set of practices identified as reflecting components of the framework. While state boards may or may not have the authority to set policy in a given area, all have the power to convene and question. The governance structure and levels of policy authority across states vary widely and affect areas of the framework within the purview of each state board of education. No state has the whole framework in place, but many states have practices that reflect the framework, and thus they are included in the report. Findings include a limited emphasis on principal evaluation systems since many states, in particular those states that did not participate in federal Race to the Top grants, are still in the pilot phase of their principal evaluation systems. However, data collected revealed a majority of states are focusing some of their resources for principal professional learning on the processes and systems needed for principals to implement the state's teacher evaluation systems. This emphasis seems to be at the expense of developing school leaders' other professional learning needs such as leadership development and developing instructional leadership capacity. The analysis revealed that states have experienced varying evolutions of the components of their leadership development systems. As stated previously, every state has a different context and governance structure, the division of authority within the state education system will vary widely. While some state boards of education have full authority over all areas of the leadership development spectrum—establishing principal standards, setting the criteria and approval process for principal preparation programs, issuing licenses to principals, outlining the evaluation procedures used to measure principal effectiveness, and prescribing ongoing professional learning requirements for principals—there are others with a limited scope of authority or only advisory roles in many of these areas.

Also included in the findings are administrative data from the National Center for Education

Statistics (NCES) Common Core of Data (CCD). These data were used to construct charts of school districts by locale type for each state. The charts provide data on the types of school districts such as urban, suburban, town, and rural for each state. Data reveal that over 35 states have 45 percent or greater of their districts identified as rural. School leaders in these districts may need different individual or organizational supports than their counterparts in urban or suburban districts.

The data described above is presented in an [interactive map](#). The data highlights the work of states building capacity through partnerships, strategic plans, and revisions of their leadership preparation programs.

As one state leader commented:

We really are digging into our school leader and administrator policies. This is unique for us. We had the rules for [principal] evaluation and a little different federal landscape at the time. This is sort of us coming at a different direction since we are not accustomed to developing policies that are less by force and more by our needs and actions.

With the passage of the Every Student Succeeds Act in 2015, states are encouraged to continue to develop both organizational and individual supports needed to develop leadership capacity. This guide captures state practices in each area of the State-Level Policy Development Framework in order to help states learn about other states' efforts in supporting leadership development.

How to Use This Document

The entire report can be downloaded as an interactive PDF or for print using Adobe Acrobat.

To enhance your reading experience, go to **File > Preferences > Page Display > Page Layout** and select **Single Page Continuous** from the drop-down menu.

Interactive PDF

Click on links throughout this report and on our [interactive map](#) to see data for each state.

In addition, NASBE's State Policy Database contains a comprehensive collection of state policies that affect educator effectiveness. The database includes policies on educator preparation and licensure, educator performance evaluation, educator professional growth and development, and professional learning standards and requirements. The online database can be searched by policy topic and by state.

State Practices by Framework Component

The State-Level Policy Development Framework is a conceptual way of thinking about the levers and processes that state boards need to consider for sound policymaking (see table below). The framework comprises organizational and individual supports and the method for achieving action around key levers and processes. The framework is anchored in leadership standards and data monitoring of the leadership development process for school leaders. For each practice that states shared, researchers categorized the practice as either organizational, individual, and/or data supports.

In the state of Alabama, standard-setting authority resides with the state board of education. The school leadership standards as of October 2015 are the Alabama Instructional Leader Standards.

Leadership development practice:

The purpose of the Alabama Principal Candidate Semester Residency is to improve student achievement and schools by developing school leaders. The residency program is funded on an annual basis to help achieve the goals of Alabama's Plan 2020. Plan 2020 states that by the year 2020, every school in Alabama is led by a well-prepared, supported, and effective leader. The program funds candidates for a semester of paid leave to complete the residency program and receive mentoring by a skilled administrator or principal. The residency program encourages and strengthens the development of partnerships between local school districts and universities and supports leadership practice that aligns to the Alabama Standards for Instructional Leaders.

State-Level Policy Development Framework component: Sponsorship

For more information visit: <http://alex.state.al.us/leadership/pcrp.html>

Leadership development practice:

The Alabama New Principal Mentoring (ANPM) Program is a two-year program for all new school leaders. Each principal receives a trained mentor as a leadership coach. The mentor helps the new principal create a development plan and a "map" of various learning activities to help the new principal speed his or her orientation to the job and facilitate professional growth based upon the Alabama Continuum for Instructional Leader Development. The district and state provide training and support to the mentors.

In the state of Arkansas, the standard setting authority resides with the state board of education. The school leadership standards as of October 2015 are the Standards for School Administrators in Arkansas.

Leadership development practice:

The purpose of the Master Principal Program is to provide training and opportunities to expand the knowledge base and leadership skills of public school principals. The Arkansas Department of Education (ADE) and the Arkansas Leadership Academy jointly determine the criteria for selection of candidates, review and modify the areas of performance, and develop rigorous assessments. The ADE provides financial incentives on a yearly basis to Master Principals serving as full-time principals in Arkansas public schools as well as Master Principals who are selected and agree to serve in a “high need” school. Master Principals are selected through a rigorous application process and receive professional development, support, and networking opportunities with fellow Master Principals throughout their tenure in the program (NASBE report, p.16).

State-Level Policy Development Framework component: Professional Learning

For more information visit: <https://arkansasleadershipacademy.org/programs/master-principal/>

Leadership development practice:

The Arkansas Leadership Academy is a nationally recognized, nonprofit organization whose mission is to develop and support leadership capacity that fosters equity and excellence in education. Working with 51-partners across the state, the academy embraces and models a collaborative learning and work culture to facilitate the development of high-performing individuals and organizations (NASBE report, p. 25).

State-Level Policy Development Framework component: Partnership

Leadership development practice:

In February 2014, the California Commission on Teacher Credentialing adopted standards for administrator induction programs called Clear Induction Credential Program Standards. California's Administrator Induction is an individualized, job-embedded, two-year program, initiation of coaching within 120 days of starting an initial administrative position. Professional learning may be offered to candidates through formal and informal partnerships and integrates school and/or district goals. For example, the Commission, in collaboration with the Department of Education, WestEd, and practitioners from the field developed a website that offers information, training ideas, and resources for each of the clear induction standards. The Clear Credential Preparation process is a part of the larger The Learning to Lead System California developed to support school leaders throughout their career continuum.

In the territory of Guam, the standard setting authority resides with the Guam Education Department. The school leadership standards as of October 2015 are the Guam School Administrator Standards.

Leadership development practice:

The Guam Department of Education is a single unified school district consisting of grades K-12. They have 26 elementary schools, 8 middle schools, 5 high schools and 1 alternative school serving over 30,000 students. The Guam Education Policy Board established a Bonuses, Rewards and Incentives Program (BR&I) for the recruitment and retention of teachers and school administrators employed by the Department of Education. School administrators can receive a one-time signing bonus and incentive pay for improving student achievement.

State-Level Policy Development Framework component: Recruitment

For more information visit: <https://sites.google.com/a/gdoe.net/gdoe/>

Leadership development practice:

Each summer the Guam Department of Education offers the Principal Leadership Academy. The purpose of the academy is to move the focus of leadership responsibilities away from operational concerns and shift instead to instructional leadership. The recent sessions center on administrators facilitating collaborative conversations with teachers on how to improve student learning.

Leadership development practice:

The Hawaii Certification Institute for School Leaders (HICISL) is a two-year program and serves as the Department's primary recruitment efforts to support aspiring school leaders. The HICISL program promotes the performance of the participants through coaching, coursework, and residency components. HICISL is administered by the Department's Leadership Institute.

State-Level Policy Development Framework component: Recruitment

For more information visit: <http://www.hawaiipublicschools.org/TeachingAndLearning/EducatorEffectiveness/ProfessionalDevelopment/Pages/Home.aspx>

Leadership development practice:

In recent years, Hawaii offers the Teacher Leadership Initiative. The initiative was established through a joint effort of the National Education Association, the National Board for Professional Teaching Standards and the Center for Teaching Quality. The goals of this initiative are to identify competencies of teacher leadership, and to help teachers develop those competencies and empower teachers as they engage in relevant leadership experiences. Teacher leaders are guided and supported by coaches, who are teacher leaders themselves. Educators can choose to add 'Teacher Leader' to existing standard or advanced teaching licenses. They first need to have their administrators verify that they have served as teacher leaders for at least four semesters over the past five years.

The goal of Northeast Leadership Academy 2.0 (NELA 2.0) is to increase student achievement by preparing and retaining principals and assistant principals to serve as instructional leaders in rural, high-poverty, hard-to-staff, and historically low-performing schools. NELA 2.0 creates an inclusive leadership development program and succession plan for a consortium of 13 high-need school districts throughout the state. The learning elements in NELA 2.0 are anchored in research-based best practices in leadership preparation and are designed to meet the specific leadership needs of rural school leaders serving North Carolina (NASBE report, p. 16).

[About National Association of State Boards of Education](#)

Methods

Researchers conducted a qualitative inquiry to examine existing state policies that focus on school leadership development. Researchers developed a structured interview protocol to collect data from each state about their state policies and programs in the following areas: recruitment, preparation, licensure, accreditation of school leadership preparation programs, support and retention of school principals, evaluation, and state monitoring or data collection effort of the leadership development process for school leaders.

State board members and/or staff members from state education agencies that oversee school leadership development participated in phone interviews conducted by researchers. More than 50 interviews were conducted, in a few cases, fewer than five; state education agencies provided written responses to protocol questions instead of participating in a phone interview. The State-Level Policy Development Framework informed the creation of the coding scheme. The deductively created codes reflect the components of the framework. To supplement interview data, researchers also conducted document analysis of state education agency policies and programs to supplement or provide more detail of policy and programs. Final analysis was guided by identifying leadership development policies and programs that exist across states as compared to the framework.

Researchers used administrative data to construct pie charts of school districts by locale type for each state in the union, plus the District of Columbia (DC), Guam, and the Northern Mariana Islands. This addendum describes data sources and methods used to create these figures. Data from the National Center for Education Statistics (NCES) Common Core of Data (CCD) were used to generate the school district locale pie charts. The 2014-15 CCD Local Education Agency (LEA) file was downloaded (available at <http://nces.ed.gov/ccd/pubagency.asp> as of 01/5/2016), and this file contained a census of all school districts in the nation. Because the initial release of the file contains only basic information about each district, the 2013-14 LEA CCD file was downloaded to incorporate urban-centric locale codes. The files were merged in order to acquire the most current list of school districts

alongside the most recently published locale codes. Since the 2014-15 file included new districts not listed in the 2013-14 file, some districts were not assigned a locale code. These districts were omitted from the analyses; they represented less than 0.3% of all school districts. Another minor shortcoming to this one-year lag is the possibility that some district locales may have been reclassified, but again the potential effect is minimal.

Pie charts were formed using counts of districts by locale code for each jurisdiction. To move from granular data to a more summarizing figure, locale codes were collapsed into four categories: urban, suburban, town, and rural. This follows the convention used in other NCES products, such as the Schools and Staffing Survey. Districts were then counted by collapsed locale type for each entity. Only “regular” LEAs (labeled type 1 or type 2) were included in the tally, matching the method used by NCES in their Digest of Education Statistics. This tally excludes charter-only districts and state-operated specialized agencies. Assignment to each state or jurisdiction was made based on the Federal Information Processing Standard (FIPS) code rather than physical location, as Department of Defense (DOD) and Bureau of Indian Education (BIE) school systems located within the states are under a separate authority. From the counts of regular LEAs by locale type, pie charts were generated for each state except Hawaii, as it has only one LEA. The chart for DC was omitted for the same reason, and Guam and the Northern Mariana Islands do not have pie charts because no locale codes are assigned to these territories by NCES.
