Preface

Any project which touches upon the artifacts of the American Revolution is bound to include a mention of the important colonial-era buildings in Philadelphia, such as Independence Hall and Carpenters' Hall. The Hall owes its primary historic significance to the meeting of the First Continental Congress, held there in 1774. It is the Revolutionary period of the Hall which has received the most attention for research and scholarship; this study is meant to focus on the period after its initial period of historic importance. The Hall is unique in that the Carpenters' Company continued to own the building and in 1857 opened the building to the public, free of charge, as an historic site.

The Company undertook the restoration of the Hall in a way that was useful to them, hence the term "fitting up" used in the minutes of the Company to describe the work done in 1857. This "fitting up" is an early example of preservation and is worthy of research not only as part of the history of the Company and their Hall but also because of its importance to historic preservation on a national level. Concurrent activity during the mid 19th century, such as that at Mt. Vernon and the ongoing work at Independence Hall, were large undertakings funded by the government or through national fundraising campaigns which sought new uses for the sites. The Carpenters' Company worked independently to preserve their Hall for themselves and for future generations.

The core of this study deals with a nineteen-year period commencing with the fitting up of 1857 and culminating in the preparations for the Centennial in 1876. It is an attempt to trace the development of the Company
which in 1857 had a modest interest in the historic nature of their building to an organization of men which in 1876 were proud to display their Hall and wanted it to appear in the best possible condition. Although an attempt was made to achieve historic accuracy the main thrust of the Company's treatment of the site was that it should suit the needs of the present while evoking an image of the past.

I chose to research this period because it seemed to be the most overlooked area of the Company's history and one which has influenced the present condition of the building. Thanks go to Ruth O'Brien and Charles Peterson for stimulating this research interest. Mr. Peterson's extensive work on the early history of the Carpenters' Company and their Hall provided the foundation upon which I have built my research. Of course it is the extensive records of the Company kept by its members which provided most of the archival documentation for the study period.

The paper is divided into three sections, the first dealing with the context of historic buildings in mid-19th century America. The second part centers on the fitting up of 1857 while the third section considers the improvements to the Hall between 1857 and 1876. Although they might not have realized it at the time, the Carpenters' Company was one of the pioneering groups in the field of historic preservation and it is my desire to document and explain their contribution to our collective history.
Introduction

During the mid 19th century there were but a handful of locations which could be viewed as historic sites, whereas today one can look upon many sites from the colonial era which have been restored and opened to the public. One of the first examples of the early work of historic preservation is Carpenters' Hall, the meeting place of the First Continental Congress in 1774, and the earliest building under private ownership to be preserved for its historic significance.

The importance of historic structures in our society reflects a recurring need for an artifact of the past that can be experienced within and without in a tactile and sensory manner. The modern historic preservation movement has its roots in the spirited battles of the nineteenth century where every effort was made to save important physical remnants of the Revolutionary era. Sites of national importance, such as Independence Hall, are more often deemed significant for the patriotic events which took place within them rather than for their architectural design.

Although Independence Hall is symbolic of the founding our nation, after the events of the Revolution had passed and the Capital of the nation had moved, the care of the old Hall became less than adequate. However, a popular appreciation for the events of the Revolution which was expressed in the literature and the arts of the 19th century, changed the way Americans cared for their historic buildings. In 1872 the Philadelphia City Council had established a committee chaired by Frank Etting to manage the refurbishing of Independence Hall. Etting expressed a sentiment presumably shared by many Americans when he wrote about the restoration of Independence Hall, "The actuality of our Founders is already losing itself in the mists of the past.
So long ... as we can preserve the material objects which these great men saw, used or even touched, the thrill of vitality may still be transmitted unbroken."¹ Every visitor who makes a pilgrimage to the historic shrines of our colonial past experiences that very connection to our Revolutionary forebears. While it is the design of the building which creates the most vivid sensory experience for the visitor, it is the nationalistic spirit which it evokes that is most often the motivation for preservation.

The popular appeal of the Revolutionary era to Americans grew during the mid-19th century, especially in cities such as Philadelphia, where Henry James could declare: "Nowhere throughout the country does our historic past so enjoy the felicity of an important concrete illustration. It survives there in visible form as it survives nowhere else."² Most preservation activity in the city was focused upon the sites of greatest national significance. During the mid-19th century, this work centered on Independence Hall and Carpenters' Hall. Both sites had suffered through periods of neglect, a pattern which ended at Carpenters' Hall with the "fitting up" of 1857.

One cannot ignore the growing fascination of Americans during the mid-19th century with the events of the Revolution. The last remaining survivors of the conflict were passing away and with them the experience and memories of that era. The new generation, facing a crisis of confidence as they looked to the noble deeds of the past and the divisiveness of current sectional conflicts, might have agreed with the sentiments of Ralph Waldo Emerson who wrote in 1837: "If there is any period one would desire to be

born in, is it not the age of the Revolution."3 This changing perception of the events and objects of the past produced three significant events in the field of historic preservation in the 1850's.

In 1850 a group of concerned citizens in Newburgh, New York, asked the state for assistance in preserving the Hasbrouck House. The house had served as Washington's headquarters and in 1848 had been taken by New York state as part of a foreclosure proceeding. Rather than sell the site, the state government was persuaded to maintain and preserve the building because of its importance as Washington's headquarters. The site is considered to be the first house museum in the country and is still run by the state of New York.4

Another significant preservation cause of the 1850's was the saving of Mt. Vernon in 1858. Ann Pamela Cunningham, who wrote her first appeal for rescuing Mt. Vernon in 1853, directed her efforts towards the development of a national campaign organized by the private initiative of regional committees. The Mt. Vernon Ladies Association was chartered in 1858 as a national organization with the sole purpose of obtaining, protecting, and restoring Mt. Vernon because of its significance as the home of George Washington. By 1859 the Association had gained possession of the site and began a campaign to preserve the house and its setting.5

Of course the other significant event in preservation during the 1850's was the "fitting up" of Carpenters' Hall in 1857. If a distinction is to be made which can separate the preservation of Carpenters' Hall from concurrent events it is the fact that it was the only site where no outside group

---

intervened or took over the building. In addition it was the only site where the decision making and funding for the restoration was to take place solely within the organization which still held ownership of the building.

The specific motivation which compelled the Carpenters' Company to "fit up the Old Hall" as they termed it, will be the starting point of this paper. Like the caretakers of Mt. Vernon and Washington's Headquarters at Newburgh, the members of the Carpenters' Company valued their Hall mostly for its historic associations rather than its architecture; patriotism was the prime factor of their preservation efforts. The members of Carpenters' Company were as affected by national events as much as by changes within Philadelphia and the neighborhood surrounding the Hall. Several key men within the organization figured prominently in the restoration of the Hall during the nineteen year study period. The motivation for "fitting up" the Hall mirrors the popular sentiments of the day for the objects and artifacts of the Revolution.

From the literature and politics of the 1850's to the Centennial period of the 1870's, a theme of viewing the past as an idyllic time far different from the present affected the way in which cultural artifacts were treated. The restoration of Carpenters' Hall, which is part of this trend, demonstrates the changing preservation philosophy of the members of the Carpenters' Company. The Company's attitude towards preserving their historic hall developed from its beginnings in 1857 to become the primary concern of the Company by the Centennial. One of the main purposes of this project will be to document the changes made to the Hall and the ideas about preservation which motivated the Company. The first section of the paper discusses the cultural background of the 1850's as it relates to the Carpenters' Company. The second section documents the first phase of improvements to the Hall
during the "fitting up" of 1857. The third section of the paper will focus upon the changes made between 1857 and 1876. In this section of the paper, the work done by the Company is divided into five categories: collections management and public outreach, interior decoration, mechanical systems, exterior surroundings, and adjacent property. While the members of the Company did not have a formal plan for the entire nineteen year period, there is a constant increase in resources devoted to the care of the Hall and a growing awareness of the significance of the building as part of the nation's heritage.

While this project will focus solely upon the nineteen years prior to and including the Centennial, the Carpenters' Company continues to maintain its stewardship of this historic site to this day. The preservation of the Hall is an ongoing process, which each generation contributes to and leaves its mark upon. This paper will document the changes initiated by a generation of men in the mid 19th century who believed in the importance of preserving one of the patriotic artifacts of our past.
I. Carpenters' Hall in Context

The members of the Carpenters' Company preside over an organization little changed since the Revolutionary period. With roots in the English guild system, the Carpenters' Company was founded in Philadelphia as an association of master builders in the 1720's. The Company was organized to establish standards for work done in the city, to provide a means of mutual instruction and education, and to support elder members of the Company, their widows and children, both financially and through apprenticeship training programs.

Between 1770 and 1774, the Company built their meeting hall on the location now known as Carpenters Court off Chestnut Street below Fourth Street. The design of this Hall was executed in the Georgian style and is essentially a symmetrical building in cruciform plan, two stories in height, constructed of timber frame with a brick facade in Flemish bond. This bond was executed at Carpenters' Hall as a finely patterned arrangement of glazed headers and plain stretchers. Except for alterations of minor decorative elements and the dramatic shift in the surrounding built environment, early images of the exterior of the Hall vary little from present day views.

The building's primary purpose was as a meeting hall for the Company and other groups. The central meeting area covers the entire first floor with the exception of an entry and stairwell in the northern side. It is believed that the main hall originally was divided by partitions which formed a central passage with two separate rooms on the east and west sides of the first floor. Evidence exists for this in the writings of the Continental Congress, but

---

further research is necessary to reach a final conclusion about the existence of such walls.\textsuperscript{7}

In 1774 the first Continental Congress sought to meet in the Hall because of its location and the fact that no other large meeting space was available save for the State House which would have been too conspicuous a place to meet. The meeting of the colonial delegates might have been considered a treasonous act against Britain, and it was necessary to conduct such activities at a place that could afford privacy and security. Carpenters' Hall provided the space in which many important decisions were made which helped to organize our own independent government at the onset of the Revolution. The Hall also hosted the meeting of the Provincial Assembly of Pennsylvania in 1776, for which Carpenters' Hall has also become known as the birthplace of Pennsylvania. However, the meeting of the first Continental Congress has been the focus of most attention and scholarship and provides a demarcation between early research on the Hall and the scope of this current project.

Designed to serve as a building for meetings and functions, the first floor and often the second floor were rented out from the time of the Hall's opening in 1774. The second floor has had considerable alterations since the completion of construction. However, the west side, which originally served as a room for committee meetings, is still used for this purpose. This space was also rented and used by other organizations such as the Library Company, one of the first tenants of the Hall. Although the Hall was in use after 1774, the original subscription funds had been insufficient to complete the building.

\textsuperscript{7}Charles E. Peterson, "Carpenter's Hall," Transactions of the American Philosophical Society, V. 43 (1953), 102. Peterson elaborates on the use of the Hall by the Continental Congress and in particular the arrangement of spaces within the Hall in 1774. Also see Illustration #1.
and all its decorative elements. Income from rentals and other property holdings allowed the Company to finish the Hall by making incremental improvements. In 1790, the Company reports having completed the front doorway of the Hall and installing a decorative surround to both north and south facades, thus completing the first building program of the Hall begun in 1770.8

In 1791 the Company decided to build New Hall on the west side of Carpenters' Court, primarily to function as a meeting space while the Company rented out the old Hall. The construction and use of New Hall was for purely economic reasons because the income generated by the rental of the old Hall was greater than if the Company used the old Hall themselves. Building on their existing property on the Court was the most profitable means for the Company to maintain its holdings. From 1791 until 1857 the old Hall was rented to various organizations while the Company remained in its, much smaller, New Hall.

A number of the important organizations the Hall was rented out to had strong ties to the history of Philadelphia or the Revolutionary period. The Library Company occupied the second floor of the Hall, while many other organizations such as the American Philosophical Society, various government agencies, and the Bank of the United States, used Carpenters' Hall for their own purposes.

The tenant of longest term was an auctioneer named C. J. Wolbert who used the Hall as his auction house for nearly 30 years. The earliest photograph of the Hall, from about 1855, clearly shows the building with

---

Wolbert's logo across the door and pediment. As recorded by a writer who described the Hall in the early part of the 19th century, he believed that the events of the Revolution were being tread upon by rising commerce: "Citizens who were familiar with it's [Carpenters' Hall] history used occasionally to glance up Carpenters Court at the quaint old fashioned building at the head of it; but unless they were in pursuit of bargains at Auction they rarely approached nearer to it than Chestnut Street." Until the re-occupancy of the Hall by the Company in 1857 the old Hall was mostly known as an auction house and only of historical interest to the relatively few antiquarians and others with a fondness for America's past.

Nor was architectural criticism of the time favorable towards the remaining structures of the Revolutionary era. Although the architecture of Carpenters' Hall received little notice when it was first built, architectural critics and proponents of modern styles in the early 19th century often derided the architecture of the past. Most commentary on the built environment expressed the advancement of modern design as compared to the simple architecture of the past. An 1843 visitors' guide to Philadelphia highlighted the progress of the city: "The spirit of change and improvement has been so busy in Philadelphia as to leave us but few relics of the olden time to show the character of its primitive architecture." Even by the late 19th century the definitive remark by British historian James Fergusson regarding American architecture before 1815 was that "there was hardly one single

---

11Charles B. Trego. Geography of Pennsylvania.. to which is appended a Travellers' Guide. (Philadelphia: Edward C. Biddle, 1843), 318.
building erected in North America which is worthy of being mentioned as an example of Architectural Art.\textsuperscript{12}

An early architectural critic and historian from Philadelphia, Louisa Tuthill, published the first history of American architecture in 1848. She writes mildly of her native city, "that it possesses an interior almost unrivalled in the world, although its exterior, when seen from a distance is not imposing."\textsuperscript{13} Tuthill focused on Philadelphia's latest buildings of the 1840's, Girard College and the Athenaeum namely, and does not directly remark upon the older structures of the city. Both buildings have plates in her book, with Girard College on the frontispiece. She describes at length the dimensions and form of the main building at the College designed by Thomas U. Walter. Her admiration of modern architecture derives from a perceived historic accuracy of the finer examples of Grecian Architecture, of which Girard College is clearly modeled. Regarding the Athenaeum, Tuthill exclaims that "this building is a beautiful specimen of street architecture," for she believed that it displayed ornament in way that was harmonious with its site.\textsuperscript{14}

However, with her praise comes criticism of both new and historic architecture. The modern buildings in New York are described as being overcome by "the imputation of sameness and bad taste," perhaps in contrast to the more academic work she cited in Philadelphia.\textsuperscript{15} Her treatment of historic architecture focuses on the historic buildings of New England. Regarding public buildings such as meeting houses, academies, and court houses, she remarks on the "dumpy cupolas" that stand in prominence,

\textsuperscript{12}James Fergusson, History of Modern Styles of Architecture. 2nd ed. (London, 1873), 498.

\textsuperscript{14}Ibid, 264-266.
\textsuperscript{15}Ibid, 262.
although the buildings "often stood upon an elevated situation, and though truly grateful and even beautiful from association... they were outrageous deformities to the eye of taste." One might assume that buildings of a similar era, such as Carpenters' Hall, were viewed with the same sentiment; distinguished by their historic associations but deplorable in style.

However forward looking architectural criticism of the period may have been, the mood of the country in the 1850's appears to undergo a distinct shift towards developing a greater appreciation for the past. The distinctions between the past and present were growing ever more apparent, especially in America's cities. In comparison to Philadelphia, New York City seemed to embrace all that is modern and displayed a willingness to sacrifice the past for present concerns. A writer remarked upon New York in 1831 that, "The denizens of New York are such utilitarians that they have sacrificed to the shrine of Mammon almost every relic of the olden time. The feeling of veneration for the past, so characteristic of the Old World, is lamentably deficient among the people of the New." Changes in urban living were rapidly advancing the city from its 18th-century roots. The American city began to lose its former sense of community, one that was rooted in the patterns of colonial life. In his sweeping look at the social history of Philadelphia, Sam Bass Warner describes the changing structure of the new city.

By 1860 the combined effects of Philadelphia's rapid growth - the endless grid streets, the scattering of churches, stations, and factories, the flood of immigrants, the novelty, the sheer size and pace of the big city - all its elements of change contribute to the thorough destruction

---

16 Ibid, 243.
of the informal neighborhood street life which had characterized the small-scale community of the 18th century town.\textsuperscript{18}

Many of the buildings of the old city were being lost at the same time, either through physical destruction or simply by losing their original use or historic association.

In 1840's and 1850's popular literature and political thought reflected the changing social structure. Literature and the arts began to place greater focus on the colonial period as a time of virtue and excitement when our forebears were somehow of better character and purer in heart than the men and women of the 1840's and 1850's.\textsuperscript{19} Political parties such as the Know-Nothings, took hold of this thought and sought to expand this into a belief that America's heritage must be maintained and could be reformed by the exclusion of and protection from foreign influences. It is perhaps a corollary that in times of social uncertainty, rising xenophobia and idolation of the past take hold of American thought.

The Know-Nothings Party was formed in the late 1840's, and by the 1850's held elected positions including governorship of several northeastern states. Historians have analyzed this time of the Know-Nothings and affiliated groups as an "early example of the use of political and scientific theory to buttress an ideology of exclusionism and hostility."\textsuperscript{20} The organization had branches in many states and held affiliations with groups such as the Sons of America based in Pennsylvania. They appealed to fears of decline in American consciousness and held a jaundiced view of the Anglo-

\textsuperscript{19}Michael G. Kammen, A Season of Youth... (NY:Knopf, 1978), see Kammen's chapter 4, "Reshaping the Past to Persuade the Present," which discusses the role of literature and the arts in forming public opinion.

\textsuperscript{20}Harvey Green, "Popular Science and Political Thought..." Journal of American Culture, VI (winter 1983), 4.
Saxon roots of society as the salvation for present day problems. The most compelling problem being new immigrants who were unlike the perceived homogeneous character of American society in the colonial period. The membership of nativist groups like the Know-Nothings is characterized as "primarily composed of middle-class professionals, artisans, and laboring men."21 The party declined during the Civil War only to be revived in the 1880's in response to the rise in immigration. However the Know-Nothings and other groups brought to the forefront of American political thought reasons for associating the past, albeit one that was Anglo-Saxon, with a more perfect and ideal time in American history.

An increased awareness and popularization of the colonial past spread throughout popular literature and the arts during the early 19th century. Authors such as George Tucker, John Neal, and Benson Lossing published many popular novels and historical works which were widely sold in the period, yet are relatively unheard of today. Nevertheless, one can not discount the influence they had on society. Their tales of the Revolutionary era were extremely popular, often "consisting of a romantic relationship that was somehow linked to the hero's activity in the great struggle against Britain."22 During this same period numerous plays relating to the subject of the Revolution were introduced, as well as allegorical forms of art directly tapping the nation's sentiment towards its colonial past.23

Of the many paintings executed of Washington crossing the Delaware River, none is more famous that that done in 1851 by Emmanuel Leutze. The following year Senator James Cooper, clearly moved by the work of art,

queried "who has looked upon that admirable picture and contemplated that majestic form and... determination which comes from the countenance of the heroic chief... and has not felt his patriotism stimulated and the blood flowing in warmer and quicker currents through his veins." These works of art appealed to the patriotism of citizens and to the growing popular appreciation of and fondness for cultural objects associated with the colonial era.

A belief that stylized images or objects could provide a link to a past time grew during this period, but focused upon the Greek, Egyptian, and Gothic Revival styles. From this development a theory of 'associationism' grew in the 1840's and spread rapidly in the following decades. This theory "held that by properly decorating and arranging a home or other environment with references to the past, one might stimulate in the inhabitants the character traits most admired in the bygone civilization." A natural development of this belief eventually lead to America's own past as a source of reference for stylistic and decorative trends.

The process of awareness and analysis of American culture, undertaken by foreign observers as early as Toqueville, and by a growing cadre of American writers, intellectuals and antiquarians would become the foundation of the Colonial Revival in America. In 1854 a young lawyer in New York remarked upon the reactions of his own city and of American society in general towards the rapid nature of development and progress in the built environment. George Templeton Strong commented in his journal, "We are so young a people that we feel the want of nationality, and

delight in whatever asserts our national 'American' existence. Hence the
development, in every state of the Union, of 'Historical Societies' that seize
on and seal up every worthless reminiscence of our colonial and
Revolutionary times." From this "want of nationality" came a rise in
patriotic fervor towards objects of the colonial era. The earliest preservation
efforts of the 19th century were successful almost exclusively because of their
historic associations rather than their architectural merit. In his seminal
history of the preservation movement, Charles Hosmer aptly places
patriotism as the primary "motivating force behind the majority of
preservation efforts, " in the 19th century.28

Of all preservation activity concurrent with the Carpenters' Hall
restoration, there are but two successful campaigns which were influenced by
the same patriotic trends which may have pushed the Company towards re-
occupying their Hall. While the Company was motivated by economic factors
to initiate the "fitting up" of their Hall, an equal influence came from
patriotic sentiments toward the historic associations with the Revolutionary
era. Other preservation efforts, those at Washington's Headquarters in New
York and at his plantation in Virginia were unique from Carpenters' Hall
because both required the use of outside funding or influence to protect the
historic site. Both were initiated only in response to imminent threats of loss
to unsympathetic owners or to new development. While all three appealed
to the patriotic sensibilities of their constituents, it is only Carpenters' Hall
which can be distinguished for retaining its original occupant and owner.

The effort to save Washington's headquarters in Newburgh, New
York began as an appeal to the patriot in every citizen by the governor of

27Michael G. Kammen, A Season of Youth... (NY:Knopf, 1978), 12.
New York and key legislators who favored taking over the house. The ca. 1750 Hasbrouck House served as headquarters for General Washington for less than a year, and remained as a private home up until the state received title to the property in 1848.29 The last private owner of the property had failed to make payments on a state guaranteed mortgage, leaving the state to foreclose on the site. Now under receivership, the property was to be sold at auction to recover the lost investment. Several local politicians proceeded to enlist the support of the governor in securing state funding for the purchase of the property. These individuals felt the house could be "safeguarded by the public rather than be allowed to fall into possibly irreverent and destructive private hands."30 In 1850, the committee established to consider the preservation of Washington's Newburgh Headquarters truly believed that if visitors to the site "have an American heart in his bosom, he will feel himself a better man; his patriotism will kindle with deeper emotion; his aspiration for his country's good will ascend from a more devout mind for having visited the 'Headquarters of Washington.'"31 With full backing of the state and especially local citizens, the Hasbrouck House became the first public house museum, and with the contemporary addition of a separate museum building to house artifacts of the Revolution, the house was and is interpreted to the year 1783 when Washington used it for his headquarters.

Mt. Vernon, George Washington's home in Virginia and a site perhaps better known for its associations to Washington, became an even greater lightning rod for national attention and patriotic idolatry of the

29Dorothy Barck, "Washington's Newburgh Headquarters," J.S.A.H., XIV (May, 1955),30-32. Writing as the curator of the site, Barck details the early history of what is termed 'the first house museum in America'.
founding father. Beginning modestly in 1853 and culminating with the possession of the house in 1859, the efforts of the Mt. Vernon Ladies Association to preserve the country house of George Washington are well documented as the first successful nationwide effort to rescue a site with important historic associations. Ann Pamela Cunningham spearheaded the effort by appealing to the ladies of the nation to provide stewardship for this important historic site. Committees were soon established in major cities across the country, the first being in Philadelphia, and inclusion in this Association became a mark of a patrician society which valued an interest in the colonial past that might demonstrate connections to an ancestral heritage.32

The commonality between Mt. Vernon and Carpenters' Hall is in the use of an organization to preserve the site. While the Mt. Vernon Ladies Association was a national effort, compared to the local scope of the Carpenters' Company, both organizations benefited from the growing enthusiasm for citizens to join into new groups or established associations as a reaction to the changing social structure of the mid-19th century.33 However, Mrs. Cunningham's organization had one purpose only, to rescue Mt. Vernon.

Ann Cunningham spent a portion of each year in Philadelphia, partly for medical concerns, and was perhaps influenced by the many historic sites of the Revolution which abounded in the city. Nevertheless, the campaign to save Mt. Vernon attracted enough interest, and funding, to enable the

33Warner, Sam Bass, The Private City, 2nd ed. (Philadelphia: U. of P. Press, 1987), 61. Warner cites the changing social structure of the city as creating a pattern in which "Philadelphians of every class and background, reacted in the same way to the loss of the old patterns of sociability and informal community - they rushed into clubs and associations."
purchase of the site by the Committee in 1859. This preservation effort tapped into the growing attachment to the colonial past as the only perceived common heritage of the expanding and fracturing young nation of of the 1850's.34

The acquisition of Mt. Vernon attracted the attention of antiquarians and architects because the house was viewed as having architectural merit, though by no means greater than the historic association with George Washington. In 1856 Samuel Sloan, a writer and architectural critic, reported of his visit to Mt. Vernon that:

The process of insufficient, trivial patching was painfully evident, all about the exterior of the mansion. In one sense, every pilgrim aided the dilapidation. ...the constant treading of thousands of tourists, would soon utterly wear out the piazza and other floors...; if the process of patching Mt. Vernon should continue many years, there would no be a solitary vestige of George Washington's Mt. Vernon left.35

The dilemma of preserving a quickly deteriorating historic structure perplexes modern curators as much as it did Mr. Sloan. His solution was to remove the interior, and reconstruct in the exact same space as the mansion, a new exterior shell of duplicate dimensions into which the interior could be placed, thus "replacing the frailness of wood by the permanence of marble and of galvanized iron."36 While such a scheme was never pursued, the Mt. Vernon of today is probably more "patches" than the mansion of the 1850's. Yet the patriotic appeal of the site is not diminished, a factor which was crucial to preservation motives of the mid 19th century.

Preservation efforts were a means of saving the significant artifacts of the past that were in some form of danger. The memories of the Revolution were also in danger of being lost, and to preserve and extend those reminiscences several writers took on the task of recording the events and people of the Revolution. Primary among the writers of popular histories of the Revolution was Benson J. Lossing, who hoped that his writings "would attract the attention and win to the perusal of our chronicles of our Revolution many who could not be otherwise decoyed into the apparently arid and flowerless domains of mere history." It would seem that even by modern standards Lossing's work such as The Field Guide to the American Revolution was rich in visual images, personal interest narratives, and historical anecdotes of both fact and myth.

Lossing included criticism in his writings, mostly directed at his contemporary citizens who were insensitive to the holidays and artifacts of the Revolution. In 1851, Lossing wrote a short essay on the Revolution for the July issue of Harper's Magazine in which he bemoans the lack of sincerity in observing the 4th of July, believing that "too often the day has been desecrated by bacchanalian revels." Lossing's criticism came out of his interest in history and his desire to spread his vision of the past as widely as possibly. However, it is his historical books about the Revolution not his criticism which were most widely enjoyed and which "may have done more than any other publication to foster popular pride in United States history."

According to Lossing's own writings, his interest in objects associated with the Revolution came about by accident. In June of 1848, while passing

---

39 Michael G. Kammen, A Season of Youth... (NY: Knopf, 1978), 52.
from the town of Greenwich to Stamford, Connecticut, Lossing happened across a stone stair in the face of a valley wall which Putnam used to escape from the British in Tryon's Raid in 1779. He stopped and asked an older gentleman about the site, who being a veteran of the Revolution gave Lossing a lengthy tale of the event in question. Of this unintended stop Lossing wrote,

The incident and its associations made a deep impression on my mind. I had been brought suddenly into the presence of animate and inanimate relics of the old war of independence, both of which were fading away and soon to be seen no more on the earth forever. I felt an impossible desire to seek and find such mementoes of the great conflict for freedom and independence, wherever they might exist, and to snatch their lineaments from the grasp of decay before it should be too late.\(^{40}\)

Inquiry such as Lossing used in Connecticut was to be his modus operandi in seeking out and recording the events and sites of the Revolution. Once an itinerary and a publisher were organized Lossing began his travels. Upon entering a city or town he would seek out a local antiquarian or senior gentlemen who might remember the significant events and important sites within a particular locale. From this tradition of oral history he would occasionally reference other scholarly or historical works for additional material. At most every stop he would make special effort to sketch the places of most importance. The "Field Book" as it was published had to be expanded considerably beyond the initial estimate to accommodate his prolific artistry.\(^{41}\)

Upon his visit to Philadelphia in 1848, Lossing gleefully writes, "I was in Philadelphia, the city of brotherly love; a glorious harvest of Revolutionary Reminiscences spread out around me, inviting the pen-sickle to reap for my garner." With this anticipation he made his first stop on November 27, 1848, to Carpenters' Hall and was quickly thrown into despondency.

On Monday morning I visited Carpenters' Hall, the building in which the first Continental Congress held its brief session. Having had no intimation concerning its appearance, condition, and present use, and informed that it was situated in "Carpenters' Court," imagination had invested its exterior with dignity, its interior with solemn grandeur, and its location a spacious area where nothing uncommon or unclean was permitted to dwell... The spacious court was but a short narrow alley; and the Hall, consecrated by the holiest associations which cluster around the birthtime of our republic, was a small two-story building of somber aspect, with a short steeple, and all of a dingy hue. I tried hard to conceive the apparition upon its front to be a classical frieze, with rich historic tryglyphs; but it would not do. Vision was too lynx-eyed and I could make nothing more poetic of it than an array of impudent letters spelling the words, "C. J. Wolbert & Co. Auctioneers, for the Sale of Real Estate and Stocks, Fancy Goods, Horses, Vehicles, and Harness." What a desecration! Covering the facade of the very Temple of Freedom, with placards of groveling mammon! That a writer with such an admiration of historic relics should be so shocked is well understood. For the Hall, as it was in November of 1848, did not resemble anything but a downtrodden temple to commerce. C.J. Wolbert had use of the Hall for nearly thirty years, and in the minds of most Philadelphians Carpenters' Hall was merely an auction house. For the members of the Company this had become a comfortable and established business arrangement; meeting in the New Hall and supporting themselves from the income derived from renting the old Hall and the Store facing onto

43 Lossing, ibid, 57-58.
Chestnut Street. The Company held other real estate and mortgages throughout the city with which they could support their own charitable needs. However this arrangement changed in the 1850's, as the Company began to develop an awareness of the importance of their old Hall and the potential economic and patriotic value in its preservation.44

Lossing's "Field Book" was published serially beginning in 1850, and appeared in its entirety in two bound volumes by the end of the decade. The Company subscribed to Harpers Weekly and has in its library a 1859 edition of the Field Book of the American Revolution. It is probable that the members of the Company would have been aware of Lossing's criticism. While no specific reference to Lossing's comments have been found in the Company Minutes, one might assume that his sentiments were taken under consideration.

44For a record of the reasoning for preservation of the Hall as recorded by the Company, see the introductory remarks of "Committee on Fitting Up the Old Hall, Minute Book 1857," Managing Committee Minutes, July 29, 1857-January 7, 1891. American Philosophical Society, Manuscripts Collection, Microfilm.
The restoration of Carpenters' Hall in 1857 began a process of improvement and embellishment that reached its peak before the Centennial of 1876. The Company initiated the process of restoring the Hall after being influenced by outside criticism and persuaded by key members who believed in the patriotic and economic reasoning for preservation. The Company had a stable arrangement of income-producing properties which provided them with some financial security, but they still chose to undertake a risky and unprecedented move. In the *Field Book of the Revolution*, Benson Lossing had written of the existing conditions at Carpenters' Hall and pleaded to his readers, "is there not patriotism strong enough and bold enough in Philadelphia to enter this temple and 'cast out all them that buy and sell and overthrow the table of the money-changers?'"¹ Partly influenced by patriotism and partly by financial planning, the Company was swayed to return to their old Hall.

Within the Company the responsibility for day to day affairs falls to the Managing Committee. Having been directed by the Company to look into the matter of returning to the old Hall, the Managing Committee appointed a subcommittee "to inquire into the expediency of removing to the old Hall."² In March of 1856, the subcommittee comprised of James Hutchinson, Michael Erickson, and Richard K. Betts reported "that the time has arrived in which it

²Carpenters' Company of the City and County of Philadelphia, "Committee on Fitting Up the Old Hall, Minute Book 1857," January 21, 1856. Managing Committee Minutes, July 29, 1857-January 7, 1891, American Philosophical Society Manuscripts Collection, Microfilm. (hereafter cited as Fitting Up MSS.) The minutes are without page numbers, therefore all references have been organized by date. These items are also in Appendix A as transcribed from the source above.
would be sound policy to remove to the Old Hall, a building originally put up for and always intended to be occupied by the Company." The approval of the Company was given by a resolution which directed the subcommittee to "take the necessary measures for obtaining possession & fit up for the meetings of the Company, & for the accommodation of the Superintendent... Carpenters' Hall, and that in such fitting up special care be taken to preserve as much as possible every feature in said Hall as it now exists indicative of its original finish." With this guiding mandate the subcommittee began the process of preserving the Hall.

The building to which the Company intended to return was not a grand "temple to freedom" as Lossing envisioned but neither was it in satisfactory condition for meetings of the Company. Several years prior to the fitting up, Lossing commented on the interior of the building that

If sensibility is shocked by this outward pollution, it is overwhelmed with indignant shame on entering the hall where that august assembly of men - the godfathers of our republic - convened to stand as sponsors at the baptism of infant American Liberty, to find it filled with every species of merchandise, and the walls which once echoed with the eloquent words of Henry, Lee and the Adamses, reverberating with the clatter of the auctioneer's voice and hammer."

Now it was up to the Company to take action and begin their campaign to "fit up the old Hall."

The subcommittee had presented to the Company a plan in favor of fitting up and returning operations to the old Hall which was based upon two basic ideas. First they presented a simple cost-benefit analysis of the project; in

---

3"Fitting Up MSS," March 26, 1856.  
4"Fitting Up MSS," March 26, 1856.  
essence proving that by re-occupying the old Hall they could then rent out the new Hall and store and eventually build a larger and more modern building fronting Chestnut Street that would yeild a higher profit than was currently possible. Secondly, they admitted that the events of the Revolution had "to a certain extent identified the Old Hall with the liberties of our country and has become a part of its history," and is therefore worthy of being maintained.6 The Company, once having occupied the building, could ensure that it be "kept in a much better state of preservation than at presently occupied, being enabled thereby to exhibit it to better advantage to the many strangers who visit our city..."7

Having reasoned with the patriotic hearts and the prudent wallets of the Company, the subcommittee was given authority to obtain possession of the Hall from the current tenant and fit up the building for the meetings of the Company and for the residence of a Superintendent. Although not discussed in any detail in the minutes, the need for accommodating a Superintendent appears to be a foregone assumption by the Company. It is apparent that the Company was aware of a need to care for the building on a daily basis, and that the best possible means of providing security and maintenance would be to have an on-site caretaker.

In the planning and execution of the improvements to the Hall, there was a continual awareness of the building as an artifact and of the governing statement that "special care be taken to preserve as much as possible every feature in said Hall as it now exists indicative of its original finish."8 While the work done in 1857 can be considered more renovation than restoration,

7"Fitting Up MSS," March 26, 1856.
8"Fitting Up MSS," March 26, 1856.
the members of the subcommittee were aware of the historic fabric. That is to say that while the priority of the work was to improve the building for the needs of the present, in doing so they had to be aware of the historic importance of the building. This awareness did not mean that the building should be returned to its original condition in 1774, but rather it meant that the loss of historic fabric would be kept at a minimum but a certain amount was necessary for some of the required improvements to the building. This emphasis on the historic nature of the building, though supported by many within the Company, can be traced possibly to the influence of one member.

Of the members on the subcommittee, Richard K. Betts remained a continual force in the preservation of the Hall and of the artifacts of its historic period. From the fitting up of 1857 to the preparations for the Centennial, the minutes demonstrate that the Betts's activities were the primary motivating force within the Company. Having been a member of the Company since 1843, Betts had sufficient seniority to allow his own interests as a historian to influence the affairs of the Company. From his initial role in the fitting up, Betts slowly increased his own influence on the direction the Company might take in the care of the Hall. Little biographical information is available about Betts, though it is known he came from an established Quaker family in Philadelphia. While Betts did hold several different positions within the Managing Committee during his membership, the Company primarily relied upon him in matters pertaining to historic records or artifacts.

As the most prominent antiquarian of the Company, Richard Betts may be cited as its first historian. He may have known Benson Lossing or was at least familiar with his writings on the Revolution. If Lossing inquired to a member of the Company regarding the Hall, it is probable that he would have
spoken with Betts. Another connection appears later in the minutes of the Managing Committee which further indicates that Betts was acquainted with the writings of Lossing. Betts requests that the Company subscribe to the American Historical Record specifically during the three years which Lossing worked as its editor. His request makes special note that Lossing is the editor of the periodical. Betts's recurring role as advocate for the preservation and documentation of the building and its records is a prominent example of the efforts of one member of the Company to maintain proper stewardship over this historic site.

Between April of 1856 and May of 1857, the subcommittee on fitting up the old Hall met and began a lengthy series of negotiations to gain possession of the Hall from C. J. Wolbert. Having occupied the Hall for nearly 30 years, Wolbert was reluctant to move his auction house. After nearly a year of negotiations the arrangements had been set and the subcommittee began to plan the details for fitting up of the Hall. Hoping to finish within two months to allow the Company to use the Hall at their next meeting in July, work began even though C. J. Wolbert still occupied the first floor of the Hall.

On May 21, 1857 the subcommittee outlined the scope of work for the fitting up. On the first floor, they decided to place a partition with sash doors between the columns on the south side of the first story to create a wardens' room. The president's and officers' desks were to be arranged at the center of

---

9To try to verify any connection between Lossing and Betts, a search was conducted of the Benson Lossing Manuscript Collection at the Huntington Library in San Marino, California. No correspondence or references to Carpenters' Hall or Richard Betts were located. The manuscripts of Richard Betts were not located in the collections of any archive or library.

10Carpenters' Company of the City and County of Philadelphia, Managing Committee Minutes, July 29, 1857-January 7, 1891, "November 6, 1872," American Philosophical Society Manuscripts Collection, Microfilm. (hereafter cited as Managing Cmte MSS.) The minutes are without page numbers, therefore all references have been organized by date. These items are also in Appendix B as transcribed from the source above.
the partition facing north. The stair treads between the first and second floors were to be repaired with cast iron nosings. A new furnace was to be placed in the cellar. Partitions were needed in the second floor east side to create a parlour and kitchen, two chambers and one water closet to be used as quarters for the Superintendent. Another partition was to be placed at the end of the entry hall on second floor for another chamber, leaving the west side of the second floor open for use as a Committee Room and Library with a partition at the south end to form a room for water closet. 11

These changes, which were outlined by the subcommittee before work began, expanded and changed over the course of the summer as work progressed on the building. The subcommittee had formulated these changes to fit the new uses being introduced to the Hall. The main floor, previously completely open, was now to be closed off at its south end to form a room for the Wardens to meet. The east side of the second floor would now have to accommodate the Superintendent and his family; a continuous presence in the Hall became a necessity because the Company itself would not be using the Hall every day. The west side of the second floor would house the Committee meeting room and the library, this being an area that would be of service to all members and used regularly.

On May 26, 1857 work began on the second story and in the cellar.12 Within several weeks Wolbert vacated the Hall and the fitting up process had reached its peak. The month of June saw the greatest activity as the work effected every part of the Hall. The subcommittee kept minutes to record the details of the process and the work in each room.

12 "Fitting Up MSS," May 26, 1857.
For the cellar, it was decided that a well should be dug and a gravel mortar floor laid down.\textsuperscript{13} The well proved impossible, owing to the saturated nature of the soil—possibly as a result of increased in-fill of the surrounding Dock Creek and other former drainage areas. The men reached a depth of 15 feet having gone through layers of gravel and clay until finally yielding as "the water then commenced oozing in."\textsuperscript{14} At that stage, the subcommittee decided to wall in the well and to lay pipes to connect with city water service. A new furnace was installed in the center of the cellar, with an opening for heat in the floor of the Hall and two flues on the sides of the building to connect with the second floor rooms.\textsuperscript{15} In the fall of 1857, a cooking range was purchased and placed in the cellar.\textsuperscript{16}

On the first floor, the entry hall still contained fireproofs that had been constructed in the 1790's for the use of the one of the tenants, the Bank of the United States. During their tenancy, the Bank had made an addition to the northeast corner of the building to accommodate a vault which was accessed through the east window of the entry hall.\textsuperscript{17} These old fireproof vaults received new iron doors to replace the existing wooden ones.\textsuperscript{18} A pendant gas light was hung at the foot of the stairs and one at the top of the stair well at the second floor.\textsuperscript{19} Although the stairs were still in good condition, each stair tread required a new cast iron nosing due to wear.\textsuperscript{20} For the first and second floor entry halls they procured an oilcloth carpet to cover the floors.\textsuperscript{21}

\end{flushright}
Within the main hall, the major change came with the placement of a partition across the south end, which included sash doors parallel to the windows to allow light into the Hall. The wallpaper on the existing walls was removed, to allow for re-plastering and the hanging of new wallpaper. Two gas chandeliers were brought in for the Hall, while two gas pier lights were arranged for the Wardens' Room. Existing chairs were fixed and painted while six new settees were ordered in a color to match the chairs, to be placed in the recesses of the Hall. A table was bought for the Hall. Window blinds, 12 spittoons, 2 umbrella stands, and a water cooler were purchased for the Hall, though it is unclear if they were intended for this room or for another part of the Hall.

Behind the president's desk, the new partition was painted with a motto voted on by the Company affirming the patriotism which weighed heavily upon their restoration. "Within these walls, Henry, Hancock, and Adams, inspired the Delegates of the Colonies with nerve and sinew for the toils of war resulting in our National Independence." This motto is visible in the earliest interior photograph of the Hall, a stereoscopic view from the period 1866-69, which shows evidence of the changes made in 1857. One can clearly see the new partition wall with the gilt letters of the motto and the

27"Fitting Up MSS," September 1, 1857.
28"Fitting Up MSS," August 25, 1857. While it is unclear who originated this motto for the Company, it may have possibly been derived from writings such as those done by Lossing in "Our National Anniversary" in Harpers on July 1851 where he writes "placed by the side of the principles involved in our struggle for independence, the men and their councils, battles, sieges, and victories wave into comparative insignificance. They are but the nerves and muscles, the sinews and the blood of the being we apotheosize..."
darker mouldings and trim which had been grained. Also visible are the chairs, settees and table as well as a gas chandelier and wallpaper. An 1865 description of the interior of the hall emphasizes that the first floor was grained in imitation of oak and that new furniture had been added in the style of the old items such as the two high-backed windsor chairs that were stamped "Continental Congress 1774."

In the second floor, major changes had to be made to provide accommodations for the Superintendent's family. These changes included placing partitions to create three chambers: a parlor, a kitchen, and a water closet. A sink was placed in the southeast corner of the kitchen along with a gas pier light. For the parlour a marble mantle shelf was procured and a gas pendant light placed in the room. Part of the second floor also required re-plastering at this time. Each of the chambers was given a gas pier light, as well as the two bathrooms which each had a water closet. For the washroom at the rear of the Committee Room, a urinal and wash basin were installed as well as an oilcloth carpet and hand towels.

The library and committee room had one large pendant gas light placed in the center of the room. An iron fireproof safe was placed in the room for important papers and documents and provided a supplement to the existing fireproofs in the first floor entry hall. The subcommittee purchased a

the Hall on the 83rd Anniversary of the meeting of the First Continental Congress.\textsuperscript{47} This event concluded the "Fitting Up" campaign of 1857. While work on the Hall continued throughout the study period, this particular phase merits a separate discussion because the Company regarded this activity as a distinct and planned action.

In trying to place the work done in 1857 within a preservation context, one may consider Carpenters' Hall as the first self-motivated program of restoration of an historic site by its original owners. The preservation of Mt.Vernon, though contemporary with the work at Carpenters' Hall, can be viewed as a nationwide rescue effort on the part of an outside organization to take over a site from its owner. While the other preservation effort described within this context, Washington's headquarters in Newburgh, began as a government action to rescue a site with the complete funding and management by the state of New York.

Carpenters' Hall is a unique historic site. The site, though in poor condition while it was rented out for business purposes, was restored through the sole initiative of the Company in 1857. They took upon themselves the task of improving the building for patriotic as much as financial reasons. The only comparable historic site, both in terms of historic context and use, is Independence Hall. The Company was aware that like their own Hall, Independence Hall suffered from a lack of appreciation. In 1865, an author writing about the history of Independence Hall remarked:

Independence Hall itself was for many years a mere lumber room... It is no wonder then that Carpenters' Hall which is private property, should have been suffered, until quite recently to be devoted to the ordinary purposes of trade, and to be kept in a condition by no means

\textsuperscript{47} "Managing Cmte MSS," August 5, 1857.
gratifying to those who love to see historic relics cherished and treated with becoming respect.48

With this sentiment, it is obvious that the Company would be adamant about who should care for the Hall. Shortly after the completion of work on Carpenters' Hall, the Company received a letter from city officials inquiring about obtaining the building from the Company. This conveys the belief held by the city government in the 1850's that Carpenters' Hall, like Independence Hall, should be in the care of the city. The Company resolutely dismissed the communication, stating succinctly that

We in common with our fellow citizens venerate it [Carpenters' Hall] not only for its associations with the stirring events of the Revolution 'but we also hold it as a sacred trust committed to us by our predecessors, which nothing shall ever induce us to part with.' Also that having fitted up the Room Occupied by the first Congress as near as possible as it was originally finished we intend as heretofore to keep it open for the inspection of all who may wish to visit it.49

Thus as recorded in the minutes, the Company reaffirmed, as one of their prime duties, their commitment to preserve the Hall.

They maintained the building by restoring its original purpose, as a meeting hall, rather than making it into a museum frozen in time and without any future besides its historic period. The uniqueness of Carpenters' Hall is its ability to partake in a continuum of history, one that honors the First Continental Congress as much as it honors the Company itself. For the Company has a history and a current presence which are omnipresent in the building. Preservation of the Hall, as it happened in 1857, while considerate of historic fabric, equally focused upon restoring its use a meeting place for

the Company. If the Hall was to continue as a living museum, meaning a site with an active and continuing history, then it would be necessary to change the Hall to fit the needs of the present.

The Carpenters' Company "fit up" their Hall in a unique way. While preserving the most salient attributes of the history of the Hall-the building, the library, significant furnishings-they were free to add or change as necessary those things which would make the Hall useful to the Company in 1857. Partitions are added, some rooms are given new uses and furnishings, with the overall effect of making the building more useful to Company. Yet the building is far from being modern, and its historic associations and 18th-century architecture are most prominent in the minds of the Company and visitors alike.

One might deduce that overt historicism and patriotic fervor grew in the following twenty years after the work of 1857. The later changes to the building are more dramatic and expensive, yet more often the motivation is historic pride rather than modernization. While the call for new wallpapers and interior decorations becomes apparent around 1870, the need for up-to-date decoration is tied directly to a desire to show the Hall in the best light for the approaching Centennial. It is part of an on-going process to embellish the Hall, brought about as a result of an appreciation of the building as an important symbol that ought to be shown in the best condition possible. The "fixing up" of the Hall continues into the present as modern improvements embellish the Hall in a way that often contradicts the documentation or existing fabric of the historic period.
III. Improvements to Carpenters' Hall: 1859-1877

A. Collections Management and Public Outreach

With the completion of the "fitting up" of Carpenters' Hall in August of 1857 the Company settled into the old Hall. The functions of the Company did not change as much as the building changed to fit the needs of the Company. In the years following the work done in 1857, up to the Centennial in 1876, the Company made improvements and changes to bring the building up to date and suitable to current needs. The discussion of these changes will be divided into categories of work done during the period. These areas include: Collections Management and Public Outreach, Interior Decoration of the Hall, Mechanical Systems of the Hall, Exterior Changes to the Hall and the Court, and Adjoining Properties, such as the store facing Chestnut Street and New Hall.

The way in which the Company chose to display its Hall derived from its most salient historic association - the meeting of the First Continental Congress. This event became the common element which defined the Hall as the birthplace of the nation in the minds of the Company. They were aware of the need to plan for visitors and for the display or reproduction of important documents.

In order that there be a continual presence in the Hall both in anticipation of visitors and for concerns over security, arrangements were made for a Superintendent to live at the Hall. Little is known of this first family, the minutes only record the day they moved in, July 29, 1857, and the payment to Martha Stewart of monthly fees for cleaning the Hall. Mrs Stewart was the widow of a member of the Company and upon her death in 1870, her daughter took over her duties at the Hall.
While the Company did not use the Hall daily, it was nevertheless open to the public. The Minutes record that the Managing Committee was directed to "open the Hall for public inspection at such times as they may be deemed suitable," and do not specify a schedule for making the Hall available to visitors. The Hall has remained open to visitors free of charge up to the present. There was an increasing need to document the historic events in the Hall and to present them to the general public. Gradually, efforts towards presenting artifacts within the Hall and printing reminiscences and other documents for public distribution were undertaken by the Company.

In the midst of the "fitting up" of 1857, the Committee authorized the purchase of a gilt frame for the Roll of Members to display in the Hall. In September of that year extracts from the old minutes were ordered to be published for the first time. Of the 300 printed, 200 were given to all members of the Company as a means of conveying a sense of the past activities and events associated with the Hall and the Company. The additional one hundred copies were for the public with several being sent to various repositories such as the Massachusetts Historical Society.

Items from the founding of the Company, such as the original subscription papers for building the Hall, were framed and placed on display. Richard Betts's involvement in the display of archival papers and publication of documents increased over the years. Often his name is listed for referral to or handling of items given to the Company or those in its possession, especially when those items are to be displayed, published, or presented in some way to the public. However he was not directly involved in the

3"Managing Cmte MSS," June 30, 1858.
stewardship of the company's own records. In the 1850's and 1860's, the Treasurer was directed to prepare an annual schedule of all documents in the fireproofs. In addition, he was to place the records of the previous year with the older documents and papers in storage. This occurred at the beginning of each year when the new officers of the Company were elected. In February of 1859, the Treasurer had read into the minutes a complete listing of the documents which included "one old Escutcheon from Old Door of Hall, 27 copper plates of mouldings and Hall."5 The practice of listing old documents and items in the fireproofs continued for several years, although the above mentioned items did not appear again.

Often the Company was given objects of historic importance either relating to the Company or the Revolutionary War. The Company received items such as original plans of the city and views of colonial era buildings or scenes. One plan of the city from 1754 published in London and given to an American in 1825, was noted for being "framed with wood connected to Carpenters' Hall either as growing near it or as having been a part of it..."6 The minutes often called for the sending of the thanks of the Company in response to the "valuable present of a rare document of the Olden times of Philadelphia."7 Items of a colonial nature or having associations with the Hall were received throughout the period, but were most common just after the "fitting up" of 1857 and in the years just prior to the Centennial. 8

A subcommittee was formed in October of 1857 to procure portraits of the delegates of the First Continental Congress. 9 The intent of having a

6"Managing Cmte MSS," January 13, 1858.
7"Managing Cmte MSS," March 9, 1859.
8Explanation of these gifts are not always included in the minutes, see footnote #25 which lists all references to such items. It is unknown if these items are still in the collection of the Hall.
portrait of every delegate who met in the Hall was never realized, as this concern fell from importance at the beginning of the new year when a new slate of officers were elected to the Company. After this point, the subcommittee does not appear in the minutes either for purchase orders for portraits or to report progress on their task. It can be assumed that the subcommittee dissolved itself without having purchased any portraits during this period. However it would seem that the members of the Company were more committed to taking care of the needs of the present rather than acquiring portraits of the past. The next year a subcommittee was formed to obtain Carpenters' tools for the use of the Hall, and within several months a chest of tools had been bought for $12.86.

The outbreak of the Civil War brought a renewed sense of patriotism to the members of the Company. Just days after the firing on Fort Sumter, a new flag and pole were ordered and placed on the pediment of the Hall. The Company was so anxious to trumpet their act of patriotism that they placed advertisements in the *Evening Journal* and the *Evening Bulletin* about the flag-raising. During the course of the Civil War the Carpenters' Company played an active part in the city's efforts to support the war and the troops. In 1863, during Lee's attack on Pennsylvania, the Company offered the Hall "to all such Carpenters who may see fit to form a company for home defence under such regulations as the Managing Committee may adopt." Meanwhile the Company took upon itself the cause of several wartime

Charities voting to donate $250 to the Citizens Volunteer Hospital, $125 to the Union Volunteer Refreshment Saloon, and $125 to the United States Sanitary Commission. The Company increased their involvement with the Sanitary Commission by donating $500 to aid the Great Central Fair of 1864. While the Fairs raised funds for the national organization and for local charities such as the Soldiers and Sailors Home, they were equally known for the displays of colonial artifacts and rooms such as the Pennsylvania Dutch Kitchen. Other regional fairs displayed similar period rooms, which became popular items in themselves. They were a means of showing the technical advancement of the present as much as a means of evoking the simpler times and "good life" of the past.

Benson J. Lossing, a prominent writer of Revolutionary histories, became involved in the U.S. Sanitary Commission and was noted as a consultant for historical accuracy on the period kitchens exhibited at several of the fairs. A specific mention of Lossing is made for his work on the Poughkeepsie Sanitary Fair Committee, which prominently displayed a Dutch kitchen similar to the one at Philadelphia. It is possible that if there was a connection between Lossing and Richard Betts as suggested earlier, that it could be one reason for the Company's support for the Sanitary Commission and for its fairs.

During this period comes the first mention of keeping any record of visitors to the Hall. In 1864, a motion appears in the minutes to purchase "a piece of oilcloth for first story around the Register." The following year

15"Managing Cmte MSS," April 19, 1864.
16Alan Axelrod, The Colonial Revival in America, (NY: Norton, 1985), 171,
17"Managing Cmte MSS," January 6, 1864. As the minutes are written this may also be interpreted as referring to an oilcloth around a hot-air floor register or grate. However, I have interpreted this to mean a register in which the names and signatures of visitors are recorded.
there is a purchase order for a new register, a pattern which continues through the Centennial. It seems that the Company began to keep a record of visitation over time. This is particularly apparent during the Centennial, when the Hall reached its highest attendance level to that date.

During the year 1865, Richard Betts began three tasks dealing with the records of the Company. The Journal of Congress, a recent gift, was rebound and inscribed for display in a special glass case on the table in the hall. In addition, Betts is directed to have "the statistics of the Company prepared, framed, and placed in the Hall." In addition to the new items on display to visitors, Betts was involved in preparing a new document on the history of the Company. The Company had directed Betts to "transcribe in a book prepared for the purpose all laws, alterations in bylaws, and the resolutions of a permanent nature that may be passed by the Company." What Betts published included the bylaws and reminiscence of the Company and a catalogue of its library, and by 1865 three hundred copies were printed. The minutes note that 125 were bound and 175 were kept in pamphlet form.

At the end of the Civil War, the members continued their involvement in patriotic causes by draping the Hall in mourning for the death of President Lincoln and in placing a contribution box in the Hall to raise funds for the veterans at the Soldiers and Sailors Home. Their support included allowing the use of the Hall to "dispose of goods remaining

---

19"Managing Cmte MSS," December 6, 1865. This publication also appears as a pamphlet under the authorship of Casper Souder, for the benefit of the Soldiers & Sailors Home Fair, and is apparently partly the same as the publication by Richard K. Betts noted in the minutes without the catalogue of the library or bylaws of the Company.
20"Managing Cmte MSS," April 26, 1865 & October 18, 1865.
from their late fair."21 They even chose to illuminate the Hall with gas jets and candles to celebrate the fourth of July. The practice of illuminating the Hall falls from the record only to be mentioned at the Centennial at New Year's Eve of 1876. For celebrating the new centennial year the Company hosted a festive party, the highlight being a series of gas jets across the front of the building which read "The Nations Birth Place".22

During the several years following the Civil War, most activity of the Company focused upon renovations and the maintenance of the Hall. By 1870, the Company decided on a new policy for the use of the Hall, resolving that "the meeting of any association or society in this building is strictly forbidden," though this did not include the Captain's Society.23 The Company had a long-standing relationship with the Captain's Society who had been renting the Hall for their meetings since as early as 1795.24 From the passing of this resolution, the Company allowed the Society to use the Hall for their meetings at no charge, being that they were the only group allowed to use the Hall on a regular basis.

The first floor of the Hall still displayed documents of the Revolution and pictures and items relating to the Carpenters' Company. The Managing Committee continued to record the receipt of "ancient documents" which were most often framed to be hung on display in the Hall.25 However the

21"Managing Cmte MSS," November 8, 1865. The Soldiers and Sailors Home had just held a benefit fair at the Union League and needed a place to store and sell the remaining items. The Company allowed this use with the restriction that it last no longer than two weeks.
22"Managing Cmte MSS," January 6, 1876.
23"Managing Cmte MSS," January 17, 1870.
25"Managing Cmte MSS," There are sixteen references to the receipt of historic documents; November 11, 1857, January 13, 1858, March 31, 1858, March 9, 1859, May 27, 1863, December 1, 1869, April 4, 1870, July 6, 1870, May 3, 1871, April 3, 1872, August 6, 1873, October 10, 1873, March 4, 1874, October 6, 1875, May 3, 1876, July 5, 1876.
manner in which items in the Hall were displayed is improved upon through the embellishment of cases and the interior of the Hall itself. The cases at the east and west wall of the first floor, presumably those which held the two banners of the Company, were directed to have gilded eagles placed above each case.  

By 1870, the Company had removed the old fireproof vault at the northeast corner of the first floor entry, which increased area of the vestibule. The partition across the south end of the Hall was removed and the columns encased with a new Ionic order trim which, with the addition of an encaustic tile floor changed the appearance of the first floor. The Company had also made considerable renovations to the library on the second floor. A common mention in the minutes is for the re-gilding of frames. All of these improvements added to the enhanced display of objects and historic documents.

In 1871 the Company decided "to have photographs of members taken and having same framed and suitably placed in Hall." In a little over a year, the Company having engaged F. Guttekunst to photograph each member, were able to have the complete set framed and hung in the Hall with a bronze rail around the frame to protect it from visitors who might get too close.

Only two references to photographs taken of the Hall itself are mentioned in the minutes. An ambrotype of the exterior of the Hall taken in 1857 from the rear of the store at 322 Chestnut Street has not been located.

In 1871 Robert Newell gave two photographs to the Company, one interior

27The laying of the encaustic floor was followed shortly after by the purchase from "Goodyear Rubber & Co. for gum cord for chair feet in Hall" on April 4, 1870.
28These first and second floor interior decorative changes will be explained more thoroughly in the following section on Interior Decoration of the Hall.
30"Managing Cmte MSS," June 6, 1871 & October 2, 1872.
and one exterior, which still exist. In 1874, the minutes refer to "stereotype plates" as part of printing a pamphlet about the Celebration of the "150th year of the Company and the 100th year of the Continental Congress."  

The charity of the Company did not waver after the Civil War. While continuing to support the Soldiers and Sailors Home, the Company readily gave help to others such as those in need after the devastating fire in Chicago in 1871. Towards people in their own employ, the Company displayed great kindness by assisting Sarah Stewart, daughter of their Janitor. Martha Stewart, Sarah's mother, who had been hired to work at the Hall since her husband James Stewart, a member of the Company, had passed away in 1856. The Company commended Mrs. Stewart for having "satisfactorily performed the duties of Janitress of the Hall for a period of sixteen years." Upon Martha Stewart's death in 1872, the Company decided to reimburse her daughter for all expenses in caring for her mother during her sickness and in paying for the funeral. The Company then employed Sarah Stewart to care for the Hall.

34"Managing Cmte MSS," December 11, 1867 & April 4, 1870.
36According the biographical records on members kept at the Carpenters' Company, the only information about James Stewart is of his election to the Company in 1833 and his death in 1856. He is not listed in the Biographical Dictionary of Philadelphia Architects.
38"Managing Cmte MSS," March 3, 1872. Although the minutes do not explicitly refer to the Stewarts as residing in the Hall, it can be assumed that they lived in the Superintendent's Quarters on the second floor. The minutes do not mention any other person or family outside the Company other than the Stewarts. After the Centennial, the Company extended their gratitude to Sarah Stewart for her "ladylike bearing in greeting visitors to the Hall" (January 17, 1877) which implies that Miss Stewart was a constant presence in the Hall; a commitment of time and energy to which a janitor on meager salary would not be required to perform unless residing in the Hall.
By far the greatest expense during the period was for investments in Centennial stock, for which the Company began their subscription in 1872 for a total investment of $1000.00. The Company's enthusiasm for the Centennial became apparent in their preparations. Several improvements were made to the displays in the Hall. The Company directed that on the large gilt frame for the Roll of Members the word "expelled" be removed from where it appears next to the name of members. Apparently the Managing Committee was directed to do this in order that visitors would not look upon the expulsion of members of the Company. The Committee procured a gilt frame similar to the Roll of Members and placed it in the Hall to display historic documents "and thus secure our Company many others that are acquiring additional value with each proceeding year." A special purchase was made to procure a gilt framed portrait of George Washington. Several gifts to the Company during this period were from important visitors such as Patrick Henry's great grandson who presented the Company with a copy of Sully's portrait of Henry. Other improvements to displays in the Hall were to the flags which were "re-upholstered" for the Centennial. An iron gate placed across the stair with the word "private" signaled the increased visitation to the Hall and the need to secure areas from public access.

In honor of its first historic event, the Centennial of the Continental Congress, the Company held a celebration in the Hall on September 5, 1874.

44 "Managing Cmte MSS," October 7, 1874.
45 "Managing Cmte MSS," March 1, 1876.
A Committee including Richard K. Betts, organized the event to include an oration by H. A. Brown and a band to play music at the Hall. The Company sent special requests to Washington, D. C., to invite the president and members of Congress to the event at Carpenters' Hall. Although most declined, Vice-President Wilson decided to attend, and the Company took care of his expenses while in Philadelphia. The Committee decorated the Hall and had a special illumination of the Hall just for the event. Afterwards, 1000 copies of the proceedings of the event including a copy of Brown's oration and stereotype plates were printed for distribution.46 While the celebration of the centennial of the Congress involved some effort and planning, the events for the Centennial of 1876 were even more extensive if only for the reason that the event was for more than just one day.

To open the Centennial year on New Year's Eve, the Company unfurled a new flag with gas jets across the facade reading "The Nation's Birth Place." The minutes note that the display brought the attention of many spectators who enjoyed the opportunity to celebrate the "birth of the Centennial Year in this Historic Building."47 By February the Company had procured bunting and flags to decorate the interior and exterior of the Hall for Washington's Birthday.48 Soon after the Managing Committee received approval to reprint 10,000 copies of Carpenters' Hall and It's Historic Memories.49 By November of that year the Company had given out 70,000 free copies of the publication.

The Centennial Exposition in 1876 brought many visitors to Philadelphia, most of whom were to visit the historic sites of the city as well as Fairmount Park. In July of 1876, a chronicle of the events of the Centennial reads:

That Philadelphia is the Mecca of every patriotic American heart which turns as surely as the needle to the pole to the birth-place of American Independence, even a century after it was declared, the unparalleled influx of visitors into the city on the days preceding July 3rd and 4th of the Centennial year was a striking proof.\(^5^\)

While the Company did anticipate that an increase in visitation would occur, no one believed it would reach a level approaching 70,000. Throughout the spring, summer and fall of 1876, the minutes reveal the Committee rushing to print additional copies of the Reminiscences and purchasing more registers to record visitors. By the end of the Centennial, the Company looked back upon the year and determined that it was necessary to "cleanse" the Hall after such use and repair the damage that had occurred over the last several month which included a general cleaning, painting, and replacement of worn materials.

In the course of the twenty or so years from the the Fitting up of 1857 to the Centennial, the Company became more adept at formulating a method of presenting collections in the Hall. Although not a self-conscious effort, the Managing Committee and members such as Richard K. Betts sought to improve the display of artifacts and objects within the Hall. Their goal was two fold, to present a picture of what the Carpenters' Company is and had been over time and what historic events were associated with the Hall. The sophistication in curatorial management of the Hall was probably on par with

the few other privately owned historic sites, and compared favorably with the publicly owned sites such as Independence Hall and Mt. Vernon.
III. Improvements to Carpenters' Hall: 1859-1877

B. Interior Decoration

The decoration and design of the interior spaces of Carpenters' Hall are just as crucial to public perception of this historic site as the curatorial and archival display of objects. At a site such as Carpenters' Hall, where the building itself is an artifact on display, it is important to understand the physical changes to the site which are a reflection of its history. The changes made to the physical fabric of the building during the period after the fitting up of 1857 are an example of how the building as an artifact can be understood as a structure of many layers, all of which contribute to its overall history.

After the fitting up, the Company did not engage in many changes to the interior until several years after the Civil War. Having spent a not inconsequential sum to improve the Hall in 1857, the Company focused its attention on other properties on Carpenters' Court such as New Hall and the store on Chestnut Street. However, activity at the old Hall such as adding items to the collection and making improvements to the building were done whenever they were necessary.

In March of 1859, several new bookcases were constructed due to a request by the Library Committee for more shelf space. The existing cases were moved from New Hall in 1857 to the Committee Room, and are the predecessors to the built-in cases which currently exist. Changes to the Committee Room on the second floor were the result of dissatisfaction in meeting the needs of all members who used it. In 1860, the Managing Committee gave the treasurer permission to order a new desk "for his use for

51"Managing Cmte MSS," March 9 & May 18, 1859.

49
books and papers to be placed in Committee Room."52 In 1862 the blinds in the room were repaired and a new fireproof safe was purchased.53 The clock in the room was fixed in 1865, and the following year new cushions for the chairs were procured for $25.00.54 In 1867 the Committee purchased new shades for the gas lights in their room; in addition they bought a cloth to cover the table, and authorized the purchase of a desk for the secretary of the Company.55 Apparently due to the number and frequency of persons using the room, it was decided "to have locks put on the drawers in committee room."56 The sum of these minor changes was to result in the need for a reorganization of the space.

By now the Managing Committee had determined to make a sweeping renovation of the Committee Room and Library. In April of 1868, the Company directed the Managing Committee to "modernise the Committee Room."57 This subcommittee of which Richard Betts was a part, undertook the task of renovating the room. All new work was done in walnut, which included the bookcases along the walls, rolling blinds, inside shutters, and eleven new desks for the committee and treasurer.58 Chairs, carpet, a new clock and gas fixtures along with a re-papering and repainting of the room rounded out the renovation. A reconstruction of the chimney-breast was necessary to allow for the insertion of a fireproof vault.

Most of the carpentry work was performed by a member of the Company, Thomas Shuster, who is often listed in the minutes for minor

58"Managing Cmte MSS," June 24, 1868.
repairs and improvements to the Hall. Most of the work was completed by
the summer of 1868, but there was still a problem with the arrangement of
the space. The following year, the Managing Committee decided to remove
from the Committee Room "desks and platform and substitute in place
thereof a large suitably arranged table with drawers for the use of the several
committees and members.. and to dispose of the same."59 By 1869 the
arrangement of the space had been defined, with the use of one large
committee table which could serve all members who used the room, rather
than many individual desks which were most impractical. The unused desks
were sold at Birch's Auction House, while the old bookcases were offered for
sale to members.60 In addition, the Committee decided to "partition off a
portion of the South Room for a Wardrobe and have same papered,"61 a task
done in walnut to match the existing work in the second floor wash room.
Other work on the second floor related to repainting or papering the rooms of
the Superintendent's quarters and laying oilcloth carpets in the entry of the
second floor.

Work on the first floor of the Hall began in 1869 with two important
decisions to lay encaustic tiles across the entire floor of the hall and entry and
to remove the partition across the south end of the hall which had created a
wardens' room in 1857.62 These decisions came about through the initial
motions of Richard Betts and were voted upon, which was an unusual
occurrence in the minutes of this period.63 The Philadelphia firm of S.A.

60"Managing Cmte MSS," January 23 & April 7, 1869.

63"Managing Cmte MSS," November 20, 1869.
Harrison was engaged to supply the English encaustic tiles for the floor.\textsuperscript{64} The removal of the partition from the hall would have increased the light level and brought the proportions of the room more closely to their condition prior to the "fitting up" in 1857. Yet it is perhaps this added light that forced the Committee to acquire shades for the windows of the first floor.\textsuperscript{65} In another recorded vote, the Managing Committee agreed to alter the existing columns in the hall so that they would "be cased with fluted staves and shafts as Ionic Columns."\textsuperscript{66} The ceilings were "frescoed", though probably not traditional fresco work. It may be that the ceilings were covered in a fresco wallpaper of the kind popular during the period.\textsuperscript{67}

In 1873 the Company continued its work on the first floor of the Hall by deciding to remove the fireproofs on the east side of the vestibule.\textsuperscript{68} Extra care was taken in this project to record the work and report the findings to the Company. Richard Betts supervised the project of removing the fireproofs and his report was read into the minutes detailing the process.\textsuperscript{69} The fireproofs were constructed in the early 1790's and apparently were at the east side of the vestibule, accessible through the window frame. They were constructed as part of brick shed attached to the exterior of the building at its northeast corner. However, the newer brickwork was separated from the old wall by a 1/8 inch thick layer of paper "so that neither bricks or mortar should

\textsuperscript{64} S.A. Harrison was the firm which carried encaustic tiles manufactured by Minton, Hollins & Company of Staffordshire, England. (see "Plain & Encaustic Tiles, for Floors" in The Architectural Review and American Builders' Journal, November 1869, p. 475)

\textsuperscript{69} "Managing Cmte MSS," September 9, 1873.
touch the Original Walls." The original window frames were still intact, one missing a sash, the other complete with inside shutters. Betts concluded that from the evidence he found "that the inside of the Hall was still unpainted when the fireproofs were constructed, though more than twenty years from its first occupancy." The items in the old fireproofs were removed and placed in the cabinets of the wash room on the second floor; an additional five feet were added to these cases to accommodate the storage of the documents.

The only change in original existing fabric was the need to remove "the decayed board partition alongside the cellar stairway and have a brick wall in its place as an additional security from fire." This alteration is evident on the inside of the stairway between the cellar and the first floor entry. The care taken to document the removal of the fireproofs demonstrates the ability of Richard Betts to influence the work done at the Hall and the desire to document the changes incurred by his generation of members of the Company.

A final group of interior work occurred around the Centennial. In the spring of 1876 new oilcloth carpets were purchased, areas of the Hall were repainted, a security gate was installed across the stairway, and a new water cooler was placed in the Hall. Of course the interior was much embellished by flags and decorative bunting purchased especially for the Centennial. After the Exposition closed in November, the Managing Committee undertook the task of "cleansing" the Hall, a process necessary due to the high visitation

70"Managing Cmte MSS," September 9, 1873.
73"Managing Cmte MSS," February 16, March 1, & June 7, 1876.
rate. A subcommittee to perform this duty, lead by Richard Betts, carried out the necessary repainting and replacement of worn items.

The interior decoration of the Hall during the period reflects a greater self-awareness by the members of the Company that they must care for and protect the Hall as an important historic site. Although most efforts seem contingent on large national celebrations, the commitment demonstrated by the members steadily increases as does their willingness to finance projects which improve the Hall more than that required to serve the needs of the Company. While the "fitting up" saved the Hall for the use of the Company as a meeting hall, it was the changes within the Company over the following twenty years up to the Centennial which transformed the Hall into a historic site that would be maintained and open to the public.

74 "Managing Cmte MSS," November 15, 1876.
III. Improvements to Carpenters' Hall: 1859-1877

C. Mechanical Systems

To have a complete understanding of the work done at the Hall, the mechanical systems must be reviewed in conjunction with other work. Artifact displays and interior decoration are often the features of an historic site that are most apparent and readily grasped by visitors. Often the mechanical systems of a historic site, which are less visible, can suffer the most neglect due their relative invisibility. It is usually an emergency which necessitates an upgrade or improvement in the mechanical systems of a building. Continual preventive maintenance as well as long-term capital improvements are both necessary to the stability of a historic building and can demonstrate the veracity of the governing organization.

At Carpenters' Hall, the improvements to mechanical systems are more often than not reactive rather than preventative measures. The first major upgrading of the mechanical systems came during the "fitting up" of 1857 when gas lighting and plumbing were introduced. After this periodic modifications to the heating and lighting systems are mostly alterations for new or evolving uses of the interior spaces.

The first of such modifications came about in the fall of 1857. In preparation for the annual dinner the Company decided to place a cooking range in the cellar; gas lights, an ash pit and coal bin were added soon after. Improvements to the new heating system were made with the addition of a "cold air box" for greater circulation of fresh air. While this was the final

major change to the heating system during this period, it was necessary to make general repairs to the system on a nearly annual basis.76

The windows of the Hall provided circulation and cooling in the summer and security through the year. The outside shutters remained throughout this period and were most likely used for protection as they still are. Iron bars are only used on the basement windows as an added security measure.77 Photographs of the period show the building open to allow for cooling of the interior by cross-ventilation.78

Improvements to the plumbing system of the Hall were made continuously from 1857 to the Centennial. During the "fitting up" new water closets were installed in the second floor of the Hall, however they were of a type that required continual maintenance.79 In addition, the Company still maintained their outdoor privy, adding a wooden screen to it in 1863.80 Interior plumbing existed only in the second floor kitchen and water closet of the Superintendent quarters, and in a water closet off the south end of the Committee Room. A bathtub was purchased for the Superintendent's quarters in 1868.81 Other than regular repairs, there were no other references in the minutes regarding the plumbing system or the type and arrangement of equipment such as sinks and toilets.

---

76"Managing Cmte MSS," Repairs to the heating system are noted on the following dates: October 12, 1859; January 8, 1862; August 23, 1865; February 7, 1866; February 6, 1867; January 22, 1868; October 14, 1868; January 4, 1871; April 2, 1873; January 7, 1874; January 6, 1875;

77"Managing Cmte MSS," October 5, 1859.

78 See Illustration # 10.

79 The water closets probably consisted of a pan-toilet or other type of early device which due to its particular design often required the replacement of parts. Throughout the period of study there are notations of plumbing repairs on a roughly annual basis.

80"Managing Cmte MSS," April 29, 1863. There were two privies on the Court during this period, one at the southwest corner of the yard for the use of Carpenters' Hall and one at the northwest corner of the yard next to New Hall. This privy was enclosed and connected to the adjacent buildings and was apparently used up to the end of the 19th century. See R. Bruce Howell's 1958 report, "Archaeological Investigations of Carpenters' Court" at INHP Library.

81"Managing Cmte MSS," May 13, 1869.

56
Gas lighting was a significant addition to the Hall during the "fitting up" of 1857. With increased use of the Hall and alterations to the window treatments, new burners and lights were added as necessary. Gas lights were added to the cellar in 1857.82 New arrangements in the Committee Room in 1859 required that two extra pendant gas lights be hung.83 Gas jets were added to illuminate the Hall for special occasions such as Fourth of July celebrations or for New Year's Eve of 1876 when gas jets illuminated a sign reading "The Nation's Birth Place."84 Gas was used for cooking, too, as the minutes recorded the replacement of a gas oven in Superintendent's kitchen in 1868.85 New gas lighting fixtures for the Hall were introduced between 1868 and 1870.86 At this point the "old chandelier" (probably from 1857) and some scrap iron in the Hall were sold.87 In 1873 new burners were purchased for the gas fixtures in the Hall.88 Gas lighting was an important system within the Hall and added to its use and decoration.

Generally, the maintenance of the mechanical systems of Carpenters' Hall became a function of the changing use and needs of building and those who used it. While certainly not negligent, the Company sought to make improvements either in response to deterioration or as an improvement in decoration or use. Such improvements were a crucial part of the stewardship of this historic property.

III. Improvements to Carpenters' Hall: 1859-1877

D. Exterior Changes

The exterior of Carpenters' Hall reflects the level of care of the building as much as its interior. The most public face of the building, the north front towards Chestnut Street is framed by the buildings on the Court. The traditional view of the Hall was dictated by its placement on an interior parcel set back from the street by a long court. This view has changed in recent years with the creation of Independence National Historical Park, however even the buildings which stand on the court today still demonstrate the importance of the exterior of the Hall and its placement on Carpenters' Court.

The setting of Carpenters' Hall was most often described as being a site that was shielded from the rush of the street and the advance of progress, a fact demonstrated by the changing architecture around Carpenters' Court. A description of the Hall from the mid-19th century attests to this view.

The ancient Hall with the exception of some recent additions and improvements, stands just as it did in the days of the Revolution; and with its drowsy old semi-circular windows, its ancient blue-header bricks, which chequer its front, and its adjacent grass plot, it is a quiet retreat, as though it stood miles from the town, instead of within less than 200 feet from the core and center of the 'maddening crowd's ignoble strife.'

The exterior of the Hall and its surroundings are perhaps the one area which has received the least amount of change. The main exterior features, the patterned brick and wooden elements have not been changed at all. The roof and cupola changed only as replacement was necessary. The front pediment

---

89 see. Photo of Hall from Chestnut St. 1855 (M.A. Root; P.9057.169(Brenner) at LiCo.)
had the addition of a flagstaff and painted sign. Nonetheless, the exterior of the Hall closely resembles its original appearance.

Soon after the "fitting up" of 1857, the Company had iron gates placed at the head of the Court on Chestnut Street. The iron gates were finished in 1858 with a granite base and, with the addition of a pointer stone on the west side of the entrance labeled "Carpenters' Court," helped to define the public entrance to the Hall. With these new gates, the security of the Hall could be better maintained by closing the entrance to "persons entering at improper hours." The building at the east side of the court had its windows closed up with bricks at the request of the Company, which may have been in response to a need for greater fire protection. A committee looking into improving fire protection recommended that rather than place iron shutters and an iron cornice on the Hall it would be better to build a wall on the sides of the court which would provide security and not modify the appearance of the Hall. These concerns were warranted by the increased size of the buildings adjoining the Hall, especially to the west of the Company's property.

Improvements were made to the land immediately surrounding the Hall to utilize that area as a garden. During the winter of 1863, the Company had work done on arbors for the garden. That Spring the brickwork and gate around the privy was repaired and a screen placed around it. By 1865, the first mention in the minutes of purchasing items to plant in the garden is

listed within the regular monthly payment to the Superintendent. The following year the Company made a special purchase of an evergreen tree to plant in the garden in the front of the Hall. Again in 1868 the Company has a tree planted in the front yard. By 1870, the Company had hired James Graham to maintain the garden around the Hall, spending $52.81 that year for plants and flowers. After construction on the Court in 1873, the garden area was resodded and planted. William Eyre, a member of the Company, constructed 15 arbors and a trellis for the garden which were made of wood and iron. Up to 1876, the Company continued to employ a gardener and even purchased a lawn mower to keep the grass as trim as possible.

At the front of the Court alterations were being carried out during this period as well. The gates at the head of the Court and the lampposts at the front stairs of the Hall were "painted and varnished" in 1866. However, by 1870 the gates fronting Chestnut Street needed to be refinished and were galvanized to provide greater protection from deterioration. In addition, a small tin box was placed on east side of the gates to receive newspapers and other materials. By 1873 the latch for the iron gates needed repair, as did the shutter bolts on the Hall. In 1875, the Company decided to have the gates facing Chestnut Street "painted and bronzed with gold bronze or gilded

97 "Managing Cmte MSS," May 10, 1865. The usual amount of purchase is $10.00, and is done by Sarah Stewart. After she becomes ill, a hired gardener maintains responsibility for the garden.

in the best manner. Also to have galvanized iron gates erected on east and west sides and on a line with front of Hall."\textsuperscript{108} These additional gates at the sides of the Hall further secured the gardens and most importantly the Hall.

Much work was done on the Court due to the construction of the new Guarantee Trust and Safe Deposit Bank building on the east side of the court and because of work done to connect the water drainage pipes to a new culvert.\textsuperscript{109} New paving and curbs of north river flagging and Belgian block were used to repair the Court. The Company required that the Bank owners pay for the damage to the Court and the necessary re-paving and setting of the stones.

The first repairs to the roof did not occur until nearly ten years after the "fitting up." Small jobs were done on the tin downspouts in the Spring of 1867, 1868, and 1871.\textsuperscript{110} A lightning rod and ball was installed on the roof in 1871.\textsuperscript{111} That same year the Company decided to have a sign on the central pediment of the north side of the building painted to read "Carpenters' Hall. Company Instituted 1724."\textsuperscript{112} Major reconstruction of the cupola was undertaken in 1873 costing over $600.00 to make repairs with galvanized iron.\textsuperscript{113} The exterior of the Hall was painted in 1869 and again in 1875.\textsuperscript{114}

The improvements to the exterior of the Hall are indicative of which elements the Company felt were most important to this historic site. The building itself, though little changed, was certainly highlighted by the addition of a flag and signs. The garden evoked a pastoral image of the

colonial past, albeit one that was probably cleaner and more manicured than the original. Improvements on the court for security simply reflected the changing neighborhood of Chestnut Street in the mid-19th century. The new gates which defined the public front of the building were probably the most visible improvement during the period.

The pedestrian who forms a part of the busy throng that pours daily along the south side of Chestnut Street will notice about midway between Third and Fourth streets a handsome iron gateway tastefully bronzed. This gate bears at its summit the following inscription: Carpenters' Hall, 1724. The gate, although a formiddable-looking barrier is not kept fastened, the object of its erection being the exclusion of persons who have made the passage way it protects a common nuisance of late years. The gate and the passage it adorns and protects, leads to Carpenters' hall, a cherished relic of Revolutionary times.115

The rapid changes in the area around Carpenters' Hall attest to Companys' steadfast ability to maintain the site in a way recognizable as a relic of the colonial era yet still able to survive the advance of modern problems.

III. Improvements to Carpenters' Hall: 1859-1877

E. Adjacent Properties

The buildings immediately fronting Carpenters' Court merit discussion because they relate to the original decision to move back to and fit up the old Hall for the meetings of the Company. These buildings also demonstrate the changing nature of the commercial area of Chestnut Street during the mid-19th century. Two buildings other than Carpenters' Hall, which the Company owned and which influenced its restoration and perception, were New Hall and 322 Chestnut Street. New Hall was the building the Company used from 1791 to 1857 as their meeting Hall. Constructed on the west side of the Court closest to old Hall, New Hall provided a proximity to the historic site which forced the Company to remember their Revolutionary past. While using New Hall, the Company yielded a financial benefit from renting out the old Hall and the building at 322 Chestnut Street. The Store as it is often referred to in the minutes, provided the added incentive the Company needed to make their move back to the old Hall.

Part of the argument which persuaded the Company to act in 1857 centered upon the value of the property at 322 Chestnut and the propensity of the site to produce a greater yield in the future. Construction of a larger building, one which encompassed the ground of both New Hall and the Store would yield a greater rental profit and allow for long-term financial support for the Company. If it weren't for these properties and others which the Company owned, the restoration and upkeep of the old Hall would not have

---

116 See Illustration # 12, 13, & 14.
null
been possible. Otherwise it would have certainly fallen like other historic buildings to the changing fortunes of the lower Chestnut Street area during the nineteenth century. As Henry James remarked upon the stewardship of important sites of New York City, "the possession of an historic monument of the first order would long since have been replaced by the higher advantage of a row of skyscrapers yielding rents." So, it would seem fortunate that amid the rapid advance of development that Carpenters' Hall and the Court on which stands would survive.

Soon after the "fitting up" in 1857, the Company began to make inquiries regarding the property on the west side of the Court. The tenant of several years at the store was the wallpaper firm of Hart Montgomery & Company. They were the firm contracted for all of the wallpaper work done at the hall in 1857. By 1860, the Company had obtained specifications from the architectural firm of Collins and Autenreith for a building on the site of 322 Chestnut Street. The proposed building was to cost $22,000 and be constructed of a cast iron front with pressed brick facing the court. By the calculations of the Company, the income derived from rentals would pay for the construction within seven years. The current lease for the Store was terminated in October of 1860, yet the Company chose not to construct the new building. Although the decision to forego the plans for a new building is not discussed in the minutes, it might have been the result of several factors such as a bad economy or the increasing turmoil in advance of the Civil War. Nevertheless, the Company undertook a renovation of the Store which in it's

118 See Illustration # 11. The firms of Hart Montgomery & Company, Merril Miskey & Thackera, and H. C. Coates, visible in this view, were used by the Company for wallpaper, gas fixtures, and printing respectively.
120 "Managing Cmte MSS," April 11, 1860.
sum was nearly three times greater than that expended on the "fitting up' of the Hall in 1857.\textsuperscript{121} The investment in the building allowed it to continue to be used for the next hundred years; the Store and New Hall were demolished in the 1950's by the National Park Service as part of the new Independence National Historical Park.

During the upgrading of the Store in 1861 the Company was mostly interested in making the property suitable for rent. Soon after, at the request of the new tenant of the Store, a one-story counting house was added to the rear of the building.\textsuperscript{122} After these renovations and additions were made to the west side of the court, the only other activity was the regular maintenance of these buildings. As part of general improvements for new tenants in 1867, the exterior of the Store and the counting house were painted, and a new stair was constructed inside from the first to second story.\textsuperscript{123} Also, the interior was painted and papered, the cellar cleaned and whitewashed and gas fixtures put into the Store.\textsuperscript{124} It was at this time that iron bars were introduced on the windows of the counting house facing the court.\textsuperscript{125} Repairs to the plumbing, gutters, furnace and other general repairs to 322 Chestnut Street were listed in the minutes as often those regarding the Hall.\textsuperscript{126} In 1872, the Store was painted again at the request of new tenants. \textsuperscript{127}

It was in 1872 that the Company sold a portion of its property on the Court. In advance of the construction of the new Guarantee Trust and Safe

\textsuperscript{121}"Managing Cmte MSS," January 16, 1861. The Company spent $9273.49 to improve 322 Chestnut Street while the expenses for fitting up and furnishing the Hall as recorded in September of 1858 were $3983.09

Deposit Bank, a realtor inquired to the Company about purchasing a plot of land at the rear of the east side of Court which was occupied by "our two-storied office building."\(^{128}\) Although initially hesitant, after some consideration the Company sold the property for $5,000.00 and had the title transferred by the Spring of 1873.\(^{129}\) The clearing of this land for the construction of a new building caused some intrusion upon the court but had little effect on the Hall itself. However, the addition of larger buildings around the Hall might be said to have aided the charm of the setting like an "odd town-nook," as Henry James had written. He described Carpenters' Hall as being admirably "shaded from the general glare; (though) the shade I speak of may have been but the shade of 'tall' buildings."\(^{130}\)

Perhaps as a result of the new construction, a water drainage problem developed at the Store. At that time the Managing Committee decided to construct a culvert in the Court to handle all waste water and runoff from Company property.\(^{131}\) As the Court was already in some disrepair, it was an opportune time to make improvements and have the Court suitably repaved.\(^{132}\) In preparation for the Centennial the Company had the exterior of the Store repainted at the same time the Hall was being done and had "the rough castings" on the east wall of the Store repaired.\(^{133}\) The final touch on the Court was to have the stone pointer sign re-guilded for the aid of visitors in search of Carpenters' Hall.\(^{134}\)

Most of the work done to adjoining properties on the Court often related to improvements to the Hall or a need to alter the buildings for new tenants. This work shows the way in which the Company handled other properties within their care compared to Carpenters' Hall. While the Company's priority was certainly the Hall, they were aware of the need to maintain the adjoining properties which provided the income which sustained the Hall and which framed its most public entrance.
IV. Conclusion

The history of Carpenters' Hall is that of a living museum. Far more than a simple re-creation of an historic site interpreted to a specific era, the Carpenters' Company is an organization which lives to serve the needs of the present while maintaining its past. The Hall in which several important historic events have occurred must be viewed in the context of the present. The Hall today is not an exact version of the building in which the first Continental Congress met in 1774. Although it is the same structure, it is one that has developed and changed with the needs of the Company which still own the building and use it for its originally intended purpose.

It is therefore unique that the Company would preserve their Hall with such vigor. For while the preservation of Carpenters' Hall began with patriotism at its roots, the Company made the Hall more than an artifact. The motivation to preserve, as it began in 1857, still inspires the Company today. Two convergent trends which directly affected the motivations of the Company in the middle of the 19th century were previously discussed. The growing urbanization of the city changed the social structure of Philadelphia as it had existed in the 18th century. In his social history of urban change, Sam Bass Warner describes the reactions of Philadelphians to the modern city: "The mid-19th century was par excellence the era of the urban parish church, the lodge, the benefit association, the social and athletic club, the political club, the fire company and the gang. Over the whole range of sociability from the parties of the wealthy to the meanest boys gang all Philadelphians sought a sense of social place and community in club life."

This social change contributed to the evolution of the Carpenters' Company from its origins as a guild for master builders to an association of professionals related to the construction industry. The Company became a social and historical organization of individuals in the building trades, with a new focus on the preservation of their historic Hall.

In looking to the past for a source of identity and focus for activity, the members of the Company were part of a trend in appreciating the Revolutionary era. In the popular culture of the mid-19th century, the events of the Revolution appealed to many Americans who felt a need for a common heritage. Benson Lossing's criticism of the condition of Carpenters' Hall in 1848, might have changed if he had seen the subsequent changes. Similar to the objectives behind Lossing's writings on the Revolution, the opening of the Hall to the public was another way of presenting the events of the past in a tangible manner. Modern historians credit the books written by Lossing for having "done more than other publication to foster public pride in United States history during the second half of the 19th century."2 In a similar way the preservation of the Hall was a way of popularizing the events of the Revolution, a fact which is supported by the overwhelming interest in the Hall during the Centennial.

The actions taken by the Company during the study period are important because they indicate the long-term commitment towards preserving the Hall which guided their work. The only organized restoration effort, the fitting up of 1857 discussed in Section II, demonstrates the effort needed to re-occupy the Hall and serves as a basis of comparison for later work done by the Company. In Section III the incremental changes

---

undertaken between 1857 and 1876, although not part of an organized preservation plan, illustrate the growing willingness of the members to care for the Hall as an historic site.

A distinction was made between these incremental changes to categorize them in a way which could reflect patterns over several years. The largest number of references, 30% of the selected minutes, concern the management of the collections and public outreach.3 This figure shows that a large part of the Company's preservation work related to the care and display of objects and documents; in essence a focus upon interpretation and curatorial concerns. Although in absolute monetary terms the funds allocated to improve the Hall in 1857 were half as much as that used for the Store in 1860, the majority of references in the minutes during the study period relate to concerns about the Hall. Only the smallest share, 10% of the total, refer to the adjoining properties such as the Store. The other 90% deal exclusively with the the Hall and the Court, demonstrating the time and concern which the Company chose to devote their meeting time to. Clearly more attention was paid to the Hall than to rental properties such as the Store. The minutes reflect the increased importance of stewardship of the Hall, so that by the time of the Centennial there was no question of whether or not to do something to preserve the Hall but to what degree action should be taken.

By 1876, the Company was better prepared to present their historic Hall to the public than at any time since 1857. Yet like the Centennial, the site was

3These figures represent the authors' own calculations based upon the total number of references (585) taken from the Managing Committee minutes of August 5, 1857 to January 17, 1877. These were itemized according to five areas of concern: 30.6% for Collections Management and Outreach; 29.2% for Interior Decoration; 17.1% for Exterior Work; 13.0% for Mechanical Systems; 10.1% for Neighboring Properties.
a dichotomy of the modern and the past. While the Hall was preserved, the addition of modern decorative treatments such as encaustic tiled floors, frescoed ceilings, and elaborate gasoliers gave it the appearance of contemporary building. True to the nature of its use, the Company had made the Hall a compromise between historic associations and modern convenience. While the Centennial Exposition is often regarded as important for the display of the "New England Kitchen" and its commemoration of the birth of the nation, it was more significantly a display of the progress of the modern industrial age. The few historically related displays were commercial in purpose. The vast majority of exhibits were of manufacturers and goods which displayed the wealth and advancement of the nation since 1776. As J.B. Jackson wrote of the historic interest in the Centennial Exhibition, "The past is prologue; interesting enough but not to be compared with the marvels of the present and the promise of the future."4

Certainly visitors to the Centennial sought out the historic sites of Philadelphia, the 70,000 visitors to Carpenters' Hall demonstrate that point. In the preservation of their Hall, the Company was showing their own progress since 1776 and were just as eager to have the interior of the Hall appropriately finished in a modern way. The actions of the Company are a reflection on the twenty years from 1856 to 1876. It was an era of an evolving industrial nation which sought reassurance in the events and characters of the past. Yet the country embraced progress as a positive change which could validate the current generations' stewardship of the nation. The care of Carpenters' Hall by the members of the Company is a microcosm of these national trends.

Preliminary Memorandum

In the year 1791 the Company built on the west side of Carpenters Court and removed from the Old Hall to the new building, since which time the meetings of the company have been held there.

Since 1791, the Old Hall has been occupied by various Institutions and individuals a large number of the members of the Company have been anxious for many years that the Company should occupy their Hall themselves and within the last thirty years several attempts have been made to remove, but all unsuccessfull (sic) until April 28, 1856 when the proposition was unanimously agreed to.

A copy of the proceedings in relation thereto are hereto annexed.

January 21, 1856.
Resolved that
The managing cmte be directed to inquire into the expedience of removing to the Old Hall, and of renting the premises now occupied by the Company and the difference of the rental, and report to the next meeting.

March 12, 1856.
Meeting of the Managing Cmte - appointed to a subcmte to inquire into the expediency of removing to the Old Hall under resolution of the Company of January 21, viz James Hutchinson, Michael Erickson and Richard K. Betts.

March 26, 1856.
Report of subcmte.
Agreed in opinion that the time has arrived in which it would be sound policy to remove to the Old Hall, a building originally put for and always intended to be occupied by the Company.
Circumstances have heretofore delayed the occupation of the Hall that do not now exist. The removal so far from having an injurious effect upon the funds of the Company will on the contrary eventually naturally increase its income.
March 26, 1856, cont'd

If this were the only argument to be advanced in favor of removal, we think it would of itself be sufficient, but other reasons may be advanced which we are willing to believe will touch the patriotic feelings of our members. In this Hall in 1774, some of the wisest and best of our countrymen met in Convention to concert measures to resist the tyrannical course pursued by the government of Great Britain, out of which grew our present state of Independence, this feat has to a certain extent identified the Old Hall with the liberties of our country and has become a part of its history.

By Occupying the building ourselves it will be kept in a much better state of preservation that at present occupied, being enabled thereby to exhibit it to better advantage to the many strangers who visit our city and who feel an interest in viewing a building which has occupied so conspicuous a place in our early Colonial history.

From inquiries made by the Cmte they are satisfied that the room and dwelling we now occupy can be rented with the store on Chestnut Street for at least $300 per annum more than the store and Hall now rent for.

The cost of fitting up the Old Hall for our purposes would be from $1000 to $1500, a considerable portion of which should be expected whether we occupy it or not in order to keep it in a good state of preservation.

Before many years it will no doubt be advisable to take down all the buildings upon the west side of the Court and erect on the site thereof a substantial store which will yield an income to the Company far beyond that now received.

The ground would admit of a building 25 feet front by 140 feet deep, say five stories high, making one of the finest stores in our city, the cost of this building we think would not exceed $25,000 from which a rental of $6,000 could be collected.

The Cmte under a view of all circumstances would recommend the Managing Cmte to lay before the Company at its next meeting for its action on the following resolution.

Resolved

That it is expedient for the Company to remove as soon as possible to the Old Hall.

Resolved

That the Managing Cmte immediately take the necessary measures for obtaining possession & fit up for the meetings of the Company, & for the accommodation of the Superintendent, the building on the South end of Carpenters Court known as Carpenters Hall, and that in such fitting up special care be taken to preserve as much as possible every feature in said Hall as it now exists indicative of its original finish.

April 28, 1856

Meeting of Company
Passes Resolutions unanimously
April 28, 1856, cont'd
Note:
The next series of entries into the report refer only to matters of vacating the Old Hall. In the succeeding year the Managing Committee makes numerous attempts at removing William Wolbert, auctioneer, from the Old Hall. Despite promises to leave the Hall, Mr. Wolbert remains until the very end of his lease in the Spring of 1857. Also drawn onto the page facing the next entry are plans of proposed changes to the first and second floors.

May 21, 1857
Present Hutchinson, Knight and Erickson, also of the M.(managing) Cmte Williams and Betts - the Cmte agreed with Mr. Wolbert that he should give us possession of the second story on Monday next, and the whole building in the course of next week upon these terms his rent to cease on the 23rd.

It was then agreed that a partition should be put across the first story close to the south of the columns with a sash door on each side to form a room for the use of the Wardens during the time of our meetings, the desks for officers to be in the center south side of Main room fronting North; the stairs to Second Story being very much worn it was agreed to put on new nosings about 1 1/2 to 2 inches wide and a cast iron plate to be put on each step bedded in mortar, all the other parts of the stairway to remain as they are excepts such ( ) as may be positively necessary; a suitable furnace to put up in cellar; in the second story Eastern side a partition near the center and one at each end North and South forming two rooms in the offsets to be used as chambers the other two, one a parlour & one a kitchen, the entry to have a partition across forming another chamber, the Western side to remain in one room as a cmte room & Library, the cases with books to be placed around the sides.

The Cmte appointed Thos. Shuster to do the Carpenter Work and Wright & Hunter to do the plumbing and put in gas pipes.

May 25, 1857
The Committee met, present Hutchinson & Knight, Wm. Shuster (Carpenter) commenced this day in second story with two journeymen and two laborers. Wm. Hunter met the Cmte. and agreed with him as to plumbing as follows, in the second story two water closets one in each of the two small south rooms and in the one room back of Cmte room a urinary and wash basin in the kitchen a sink in SE corner, a well to be dug in the cellar five feet diameter to water, the Cmte also agreed to have a gravel mortar floor in cellar.
May 26, 1857

Cmte met present Hutchinson & Knight also of M. Cmte Williamson & Williams, the work progressing in second story and commenced digging well, it was agreed to notify Elijah Jones, bricklayer and Weaver & Volkmer, furnacemen to meet the Cmte tomorrow morning.

May 27, 1857

Cmte met present Hutchinson, Erickson, & of Managing Cmte Williamson, Mr. E. Jones, Mr Weaver, and Mr Hunter also met the Cmte. It was agreed that the furnace should be built about the center of the cellar with opening to first floor main room and one opening to small back room and the heat to be continued in flues on each side of building to second story rooms, the furnace guaranteed to be complete and answer fully the expectation of the Cmte.

It was then agreed with Mr. Hunter to place gas pipes as follows, for two lamps on platform of front steps, for a pendant light in first story foot of stairs, for two pendants in main room and one ditto over President’s desk and in back room for two pier lights. Second Story one pendant head of stairs, in the parlour and Cmte. Room for one pendant each and in kitchen, three bedrooms and small room back of Cmte Room, each for one pier light, the number of burners to be sufficiently large for any number that may be wanted.

The well is now about 15 feet deep and the diggers are much troubled with water, in digging came to gravel about 3 feet down, extending down about 3 feet then came to clay the water then commenced oozing in.

Carpenters work progressing in second story of fixing stairs. Mr. Wolbert is not yet out of first story.

May 28, 1857

Cmte met present Hutchinson Knight and Erickson also of the Company Colladay, Williams, Luick, and Eyre... work progressing. Wright & Hunters’ men digging in yard for water pipes, men in cellar at heater and pumping water out of well. Agreed with Mr Wolbert to pay them $15.00 for old furnace and tin pipes.

May 29, 1857

Cmte met, ...work progressing favorably.

May 30, 1857

Cmte met, present ... Mr Hunter reported that the well in the cellar could no be got any deeper as the water came in so fast, had the punch in use but could make no headway, decided to wall it up as it was. The plasterer commenced making stuff.
June 1, 1857
   Cmte met, present... decided to replaster part of the walls and partitions of second story and make the sash doors to the wardens' room to correspond with the windows as we want more light in the Hall.

June 2, 1857

Motion, for R. K. Betts "to purchase a convenience for members to black their boots and have placed in the 'Retiring Room'."

106
September 9, 1873
No. 73 for $641.37 to Austin & Obdyke for galvanized iron work on cupola etc.
    Complaint received from 322 Chestnut Street of water in cellar, the committee checked wells, then recommends "a culvert be constructed up the court to receive waste from the basins, the surface drainage of the Store, Court, Hall, and water closets."
    Committee on Fireproof presents the following report:
    The fireproofs have been taken down. From the care taken in their construction ( ) it very tedious. We found that our predecessors in allowing them to be up, had carefully protected 'The Hall' by having paper nearly the eighth of an inch in thickness placed so that neither bricks or mortar should touch the Original Walls. The Old Window frames were still in place, one having the sash removed and the other having the sash and inside shutters in perfect order. These show that the inside of the Hall was still unpainted when the fireproofs were constructed, though more than twenty years from its first occupancy.
    One of the vaults in the cellar has been used for coal, the other has had the shelving from those now removed placed in to accommodate the crockery and belongings to the Company.
    The valuable books and papers were removed to the Fireproof in the Committee Room, those of comparative little value were placed in the case in the retiring room for the present. They were found to be in a very musty condition from the dampness of the vault.
    We recommend that the case in the retiring room be continued up an additional height of five or six feet as a depository for these and other papers.
    The cost of removing the rubbish has been avoided by putting it in the cellar on the east side of court.
    A change has been made in the gas main to the front wall, the plastering brickwork tile flooring wainscoting and lining the ceiling will be completed without delay.
    The Committee though had to remove the decayed board partition alongside the cellar stairway and have a brick wall in its place as an additional security from fire.

    Submitted by R. K. Betts

October 10, 1873
No. 82 for $45.00 to "Austin & Obdyke for refrigerator, tinwork, etc. for Hall"
No. 83 for $198.73 to George Greely for brickwork for Hall

January 6, 1876
Reported that "the flag ordered at last meeting had been procured and
unfurled on the opening of the new Centennial Year on the eve of which the
front of our Hall was illuminated in a brilliant display showing in gas jets the
words
'THE NATIONS BIRTH PLACE'
Which attracting much attention brought in a large number of interested
spectators, who seemed to enjoy the opportunity, lingering until past the
midnight hour thus witnessing the birth of the Centennial Year in this
Historic Building."
No. 91 for $36.00 to F. Guttekunst for photographs of members
No. 92 for $31.50 to Hortsman Brothers for a new flag
No. 93 for $15.35 to James Allen for repair of rough castings on east wall of
Store
No. 94 for $22.25 to William Boyle for care of garden, furnishing plants, etc to
Nov. 1875
No. 95 for $13.47 to Walter Allison for carpenter work, hardware, etc
No. 97 for $120.00 to Carlisle & Joy for "painting east wall four coats and
blocking off, also reguilding sign 'Carpenters Court'."

January 19, 1876
Suspended resolution restricting meetings in Hall to allow the
Universal Peace Union, to "occupy our Hall for 4-5 days in the month of July
next a few hours each day for the purpose of holding public meetings." Note:
letter from Universal Peace Union is amended to the minutes

Resolved that members of the Company join with the Managing
Committee for "the purpose of perfecting arrangements whereby the
members of the Company may celebrate in a becoming manner the 100th
anniversary of the Nations Independence."

February 2, 1876
Motion, Secretary be directed to procure "suitable envelopes and stationary for use of Committee. Also a suitably ruled and bound book for a registry for the autographs of visitors."

February 16, 1876

Special meeting called for purpose of finding "suitable decoration of the Hall for the approaching 144th anniversary of the birth of Washington on the 22nd."

Motion, Chairman is authorized to procure "suitable flags and the necessary fixtures for holding them to be displayed from the second story front windows and smaller sized ones for the Decoration of the interior of the Hall and Library Room."

March 1, 1876

Motion, authorized to have "a light wicket gate placed near bottom of stairs with a suitable private fastening."

No. 5 for $20.60 to Godfrey Krause for fixing gas pipes for illumination etc.
No. 6 for $53.75 for flags and fixtures for decorating Hall for Washington's 144th Celebration

March 15, 1876

Special Meeting called for decorating Hall, appointed Committee of two from the Managing Committee to check into cost of decorating interior and exterior of Hall for Centennial.

March 22, 1876

Committee reports costs of decorating Hall ranging from $478 to $715; "But deeming it impolitic to incur so heavy and expenditure, and in view of the rapid rise in prices of decorating materials and labor," the committee suggests deferment believing that the Hall can be sufficiently decorated at a cost not exceeding $325.00.

March 29, 1876

Authorizes $400.00 to be spent on decorating Hall for Centennial

Subject of publishing a brief history of the Hall, committee is reminded on printing 1000 copies of reminiscences for gratis distribution in October of 1873, therefore the Managing Committee now resolved that 10,000 copies of Carpenters Hall and Its Historic Memories be made for the Centennial Celebration for distribution gratis.

April 5, 1876

No. 19 for $16.50 to Matsinger and Brother for iron gate on stairs
No. 20 for $161.24 to J.T. May & Co. for bunting and decoration of Hall
No. 22 for $34.03 for new registry book and other stationary
May 3, 1876

Motion of R.K. Betts to have cellar cleaned and whitewashed and to have a new oilcloth placed on the floor of second story entry.

Thanks of Company are sent to Daniel K. Cassel for lithographic copy of map of the city of Philadelphia from surveys taken in 1750 showing ownership, public buildings etc.
No. 24 for $50.00 to J.L. Smith for decorating Hall
No. 25 for $45.00 to W.E. Needham for painting shield with coat of arms etc.
No. 26 for $225.00 to H.C. Coats for printing and binding 10,000 copies of Carpenters Hall and Its Historic Memories

June 7, 1876

Report that the cellar cleaned and whitewashed and "new oilcloth placed on the second story Hall floor after having floor planed over as directed at last meeting."

Request received for loan of Peyton Randolph portrait to E.D.Merchant for making a copy; secretary reports that terms of donation do not permit it leaving the Hall.

Authorize purchase of "two more registry books to match the one now in use it being already nearly filled and to have them numbered conspicuously on the back no. 1,2,3."

Authorize purchase of a "lawn mower of suitable size for use around Hall."
No. 31 for $52.22 to J. H. Orrie & Co. for 26 1/4 yards of oilcloth for Hall
No. 32 for $9.25 to Matsinger Brothers for flags etc.
No. 34 for $6.55 to Godfrey Krause for gas fitting
No. 35 for $18.45 to Isaac Williams & Co. for water filter and cooler etc.
No. 36 for $92.00 to Walter Allison for portrait of Washington $80.00; and to Cooper & Conrad for 10 foot flag, $12.00

July 5, 1876

Authorize loan of Peyton Randolph portrait to Mr. Marchant (artist) for two days provided given proper security that portrait be returned.

R.K. Betts is authorized to have 10,000 additional copies of Carpenters Hall and Its Historic Memories "with its location printed thereon, also to have letter of John Adams inserted in full in each copy in italics."

Received thanks from Essex Institute in Salem, Massachusetts for copy of 1873 Rules of the Company and for Carpenters Hall and Its Historic Memories.

"Photographic copy of Sully's portrait of Patrick Henry was received from his great grandson William Henry of Virginia who was a recent visitor to our Hall." Authorized to have it framed and hung in Hall and also the ancient map of Philadelphia presented by Daniel Cassel hung in Hall & framed.

Authorized purchase of two more registry books, of similar size and binding, no. 4 & 5.
July 5, 1876, cont'd
No. 44 for $21.00 for two new registry books
No. 45 for $18.00 to Field & Hardi for a lawn mower
No. 46 for $164.00 to H. C. Coats for 10,000 copies printed and bound of Historic Memories
No. 47 for $7.50 for lettering and hanging flag in front.

August 2, 1876
A copy of Etting's Historical Account of the Old Statehouse was purchased on motion of William Eyre.
No. 50 for $36.12 to Wm. Eyre for registry books, plumbing bill, and sundry expenses

September 6, 1876
Motion to procure three additional registry books, no. 8, 9, & 10.
"The edition of Carpenters Hall and Its Historic Memories being exhausted and the visitors to the Hall still continuing, R.K. Betts is authorized to procure an additional 20,000 copies, making in all to date 50,000."
No. 53 for $350.00 to H. C. Coats for 30,000 copies of Carpenters Hall and Its Historic Memories
No. 54 for $17.00 for Registry Books 6 & 7
No. 56 for $37.00 to Wm. Boyle for garden

September 12, 1876
No. 67 for $220.00 to H. C. Coats for 20,000 copies of Carpenters Hall and Its Historic Memories
No. 68 for $50.00 for additional registers no. 8 to 13 inclusive.

November 1, 1876
No. 73 for $17.00 for two register books no. 14 & 15.

November 15, 1876
Special meeting called to "consider what repairs are needed to place the premised and furniture in good condition after the very hard usage to which they have been subjected during the Centennial Period just closed. In which it is estimated that not less than a half million visitors coming from nearly all parts of the civilized world have been drawn to view our justly venerated and Historic Building, nearly 70,000 of whom have left heir signature and address on our Registry Books.

On examination it was found that the oilcloth on the Hall in second story was so much worn as to require renewing, and the entire 1st and 2nd story of the Hall together with the decorating bunting, flags etc. requiring a thorough cleansing, on motion it was resolved that S. Rain, R.K. Betts be appointed to attend to same and make necessary repairs to Hall."
December 6, 1876

Committee on Cleansing of the Hall reports "service completed. A new floorcloth called 'Linoleum' has been place on the 2nd story Hall. The chairs reupholstered and the Hall passages, stairs and library thoroughly cleansed."

Authorized committee to review the minutes and have report drawn of expenses for Centennial.

No. 77 for $97.10 to R.K. Betts for Linoleum floorcloth, reupholstering chairs, repairs etc.

No. 81 for $22.24 to Samuel Rain for carpet cleaning and repairs to Store and Hall
January 3, 1877
Report of Expenses for the Nations First Centennial

January 17, 1877

R. K. Betts motion, now resolved..."whereas the large number of visitors at our Hall during the Centennial Exhibition largely increased the duties of our esteemed Superintendent Martha J. Stewart. Her ladylike bearing and courtesy to those visiting our Hall deserves the notice of the Company. Therefore...

Thanks of Company is sent to Martha Stewart with bonus of $200.00

January 17, 1877

Resolved that the Managing Committee have a "case or cabinet placed in the second story entry in which may be deposited such ancient relics as our members and others may be pleased to donated or loan to the Company."

Charles K. Betts motion that "the present decoration of the Hall be continued as now except removing the Foreign Flags and replacing them with our national emblem."

Thanks of Company is sent to R. K. Betts "for compiling the excellent pamphlet for distribution to our Centennial Visitors."
