Institutional Governance for a Shared Glocal Engagement Mission

Abstract
Governing bodies can and should play essential roles in advancing a glocal agenda. Governance is essential because glocal work is strategic, includes an accountability dimension and relies on the talents and perspectives governance participants can bring to the university. Boards should leverage their traditional oversight and accountability functions and their strategic work. However, to be most useful in this work, boards should also add a leadership function, in which they make sense of a dynamic environment and raise key issues for the university to address.

4.1. Institutional Governance for a Shared Glocal Engagement Mission

Peter D. Eckel

Abstract

Governing bodies can and should play essential roles in advancing a glocal agenda. Governance is essential because glocal work is strategic, includes an accountability dimension and relies on the talents and perspectives governance participants can bring to the university. Boards should leverage their traditional oversight and accountability functions and their strategic work. However, to be most useful in this work, boards should also add a leadership function, in which they make sense of a dynamic environment and raise key issues for the university to address.

A good governance structure and favourable regulatory conditions can promote innovative behaviour among tertiary education institutions.

Too many college [and university] boards add too little value too much of the time.

Richard Chait, Trusteeship

Yes, governance is exceedingly important to universities around the world now and into the future as the first quotation suggests. Yet, as the second demonstrates, it is exceedingly difficult to do well and do well consistently. The challenges and opportunities of the glocal context only seek to exasperate these two points. This
chapter explores the need for increasingly effective governance as essential to actualize glocal universities and offers insights for those governing universities as to how to move forward. This chapter outlines the need for increased and different governance capacity. It offers strategies to ensure a glocal focus in governance, provides a three-dimensional framework for glocal governance, and offers a checklist to ensure governance effectiveness. The ability to address global issues such as health, security, human rights and climate change, while also addressing local needs such as workforce and economic development, citizenship, tech transfer and innovation will tax university governing bodies unprepared for the challenges. If they are not intentional about governing the glocal university well, which includes putting the right processes and structures in place but also adopting the necessary mindset and perspective, governing bodies will fall short of their responsibilities and risk becoming a burden, rather than a strategic asset for their universities.

Writing about university governance in a global context is challenging because of the variance in governance structures and scope of authority and because the policy contexts in which governing occurs differ. To find common ground within this diversity, governance is defined as the structures and patterns of interaction through which key stakeholders make strategy-level decisions that affect the future trajectory of the university. It adopts a future emphasis and addresses strategy-level decisions to differentiate it from management. Furthermore, this chapter focuses specifically on governing boards, which also vary in their composition, structure and scope of responsibilities as well as their relationship with government and with university administration.

Why governance matters more in a glocal context

The demands facing universities around the world are too great and the issues too complex for ineffective governance (Association of Governing Boards, 2014; Fielden, 2008; Shattock, 2013). One of the pillars of world class universities is having 'appropriate governance' (Salmi, 2009: 27). However, effective governance does not come without appropriate intentionality. Systems in both established and developing governance contexts fall short. For instance, even exclusive of the complexities of a glocal agenda, a survey of American university presidents found that one in five individuals leading research universities – those types of institutions arguably advancing both local and global agendas that include teaching, research, and economic development, tech transfer and other types of service – lack confidence in their board’s effectiveness to address future challenges over the next five years (Eckel, 2013). The sentiment is echoed in a recent survey of Malaysian vice chancellors (Ministry of Higher Education, 2015). Forty-six percent reported that “not all board members are clear on their roles” and 76 percent noted that the “current board composition is not optimal”.
To risk vast over simplification, universities are facing three challenges that call for increasingly effective governance and which come into sharper relief in the glocal context:

1. **Universities will need to do new things and embark on new pursuits.** The world is not stagnant and universities must understand, shape and respond to evolving challenges in the myriad contexts in which they operate to remain viable civic institutions. Governance plays an important role in bridging to the external environment, particularly for those governing bodies that have external stakeholders serving in governing roles (Aghion et al., 2008). It is also the arena in which stakeholders come together to make decisions about future institutional or system direction.

2. **Because universities tend not to have sufficient financial resources to pursue everything they would like to, they need to make choices among competing priorities.** Governance is the structure where institutions make choices. “Good governance requires institutional leaders to be attentive to the mission of the institution. Without a clear mission, institutions often fall into the trap of trying to be all things to all people” (Harkavy et al., 2014: 103). Governance determines mission and sets priorities and strategy within that mission.

3. **Universities need to be increasingly accountable for their actions and impact.** When governments provide universities with more autonomy, as is the case in many countries, there is a corresponding shift in accountability.

While these three charges are not new, they are likely to continue to evolve, often exponentially, along two dimensions: complexity and speed. The result is more pressure to get governance right (Association of Governing Boards, 2014, Ministry of Higher Education Malaysia, 2015) and do so within more consequential time constraints.

To complicate matters further, the environments in which universities must operate are changing rapidly, and the variance in policy context calls for different responses to a glocal governance agenda. For instance, those universities in countries with a strong market-orientation and low state control (Dobbins et al., 2011), such as the USA, the UK, Canada and Australia, will require continued governance capacities to successfully balance market forces with increasingly complex public policy and mission-serving objectives that may be at odds with them (Berdahl, 1971; McGuiness, 1997). The pull of the market may suggest one set of priorities and pursuits while those of public policy or mission may suggest another (Marginson and Considine, 2000; Morphew and Eckel, 2009). For example, universities may be driven to invest in yet another Executive MBA programme in the pursuit of revenue and cut back funding for teacher education or music that requires subsidy. Countries with historically more state-centred higher education systems, such as India (Ministry of Human Resource Development, 2013), Kazakhstan (Hartley et al., 2015) and Malaysia (Ministry of Education, 2015), are advancing autonomy agendas that require new and heightened capacities for self-governance. Less direct governmental control and intervention, including financial support, mean more responsibilities

---

1 Some will argue with this point, seeing that universities also serve an important conserving function, which they do. However, they also need to be responsive to evolving needs, new fields and disciplines, cutting edge research and social and economic development.
for universities and their governance bodies. Compliance with ministerial policy is no longer the gold standard, but financial success and mission relevance are the twin indicators of university wellbeing. These universities most likely need to develop their governance capacity within a complex glocal context where little robust governance capacity existed before (Hartley et al., 2015).

The importance of governance is increasing and it is evolving at the same time that 1) universities are changing, and 2) the environments in which they operate are shifting. These threads create a dynamic situation calling for more intentional and effective governance.

Without intentional focus on the needed governance, universities will likely struggle to meet the demands of both local and global challenges. Too many governance bodies are ‘mired in mediocrity’ and do not focus on substantive issues, do not have the ability to tap the intellectual capacity of board members, do not put in place a culture of collegiality and effective discussion and decision making, and do not work to intentionally improve their own governing processes (Trower and Eckel, 2015). Such middling performance will be a detriment to universities in a glocal context. As heightened demands outstrip the current capacity of most governance bodies, higher education will need to improve governing bodies that intentionally evolve to add value. They must ask themselves hard questions about their priorities, structures and cultures (AGB, 2014; Chait, 2016).

Ensuring a glocal focus

The starting point to governing the glocal university is to understand the multiple roles of governance and then to be familiar with how those roles function in a glocal context. Governance has traditionally been seen has having two functions – ensuring accountability and providing institutional strategy, or conformance and performance roles (Cornforth 2003, as cited in de Boer et al., 2010). In the first function, governance focuses on the evaluation of efforts and often public (or governmental) reporting. Governance pursues questions related to how well the university is conforming to its mission and purpose. The second strand of work focuses on the forward-vision, strategic work of boards to advance the university.

However, governance in a glocal context may well need to step into a third role. Chait, Ryan and Taylor (2005) argue that boards should provide leadership, or what they call ‘generative work’. The leadership work of boards brings diverse governing board member knowledge and wisdom to the challenges and opportunities facing the university to provide overall leadership in conjunction with the CEO for the long-term future of the university. Trustees contribute their abilities to think, perceive and frame issues and understanding to the collective work of the board to help the university think wisely about its future.

The leadership/generative work of governance is about “perceiving, grasping and grappling” (Trower, 2013: 18) collectively on behalf of the university in partnership with the administration and academic staff. This work asks governing bodies to look into the future and the unknown, to spend time not approving policies or ensuring compliance and progress, but “being playful and inventive,” and “focusing on higher-order problems” (Ibid: 134). In this line of governance work the board "generates: 1) insight
and understanding about a question, problem, challenge, opportunity or the environment; and 2) a sense of the organization's identity in order to most effectively respond... It is about how the organization or board wishes to frame – consider, examine – an issue”. (Trower, 2013: 12).

The likely complexity of a glocal agenda demands this type of work because it is fast-moving, ambiguous and full of contradictory signals and priorities. In this role, boards should look for clues and cues in the environment that will be important to the university, determine how to make sense of what they see, determine what ‘frames’ will they use to define and understand the problem or opportunity (Chait, et al., 2005), and make collective sense, turning perception and speculation into action. Trower (2013: 12) cites the long-time head of research at General Motors, Charles Kettering, “a problem well-stated is a problem half-solved”.

Figure 1. Governance as leadership framework.

Boards will need to develop capacities that allow them to work across these three types of work. Trower has an extensive comparison (2013: 17-18). Brief highlights appear in Table 1.

Table 1. Comparing the different work of boards

<table>

</tbody>
</table>
The work of boards is and should be complex. Boards need to understand and appreciate the diversity of their work across these three dimensions of accountability, strategy and leadership.

The challenge and opportunities of glocal governance provide ample opportunity to work across these three domains and place increased demands on the leadership aspect of governance. The table that follows outlines a set of glocal-related questions that boards should explore related to four functions of their work - purpose, performance, resources and bridging to external communities.

Table 2. A matrix of board responsibilities and governance modes

<table>
<thead>

### A checklist for effective governance

The work of governing in a dynamic environment can be challenging. However, boards can and should make intentional efforts to be effective. A definition of effective governance by American university governance scholar Richard Chait can be extremely helpful in creating a checklist for those governing universities and those ensuring effective governance:

> Effective governance entails influential participation in meaningful discussions about consequential matters that lead to significant outcomes (Chait, 2009: 2).

This simple statement, although complex in practice, has four elements that can serve as a template for boards to ensure their effectiveness. Furthermore, these four elements must work in tandem. Failure in any single dimension will lead to ineffective governance.

- **Influential participation:** Does the board have on it the right people and to what extent are their skills, knowledge and talents being fully tapped? Too often boards are not composed of the right people for the job of governing. **In a glocal context, are board members well versed in global trends and issues as well as local ones? Do they have a firm understanding of trends in both of these contexts to do the work of governance?** Secondly, are these individuals prepared for the tasks of governing? Is there an orientation? Do clear expectations for board members exist and are they communicated to them?
Meaningful discussions: *Does the board have the knowledge and ability to engage in meaningful discussions about local as well as global issues?* Are board members well informed about the university's mission, values and history, as well as future challenges? Are they clear about the context – the global and local contexts – in which it must operate?

About consequential matters: *Does the board spend its time on substantive matters?* Too often board meetings are full of content that is not sufficiently substantive or consists of too many presentations without sufficient discussion. *To what extent is meeting time used well to focus on the most important issues (and not simply the urgent ones)?* How intentionally are meeting agendas crafted to ensure that they have the right issues and are allocated appropriate amounts of time? Is sufficient time spent on both global and local issues; on glocal ones?

That leads to significant institutional outcomes: *To what extent is the board confident that its work adds value to the university? To what extent does the work of the board matter? And how does the board know this?* Has it conducted an evaluation of its impact and of its meetings?

Building governance capacity

Boards many need to develop new structures or revise their current ones to accommodate glocal issues. For example, the University of Pennsylvania has the Local, National and Global Engagement Committee of the board, which is atypical in the USA (See Box). An alternative, and more common, strategy is to embed such work across board committees. For example, the Academic Affairs Committee addresses issues associated with teaching, learning, the curriculum, assessment and faculty. Whereas, new business opportunities might fall to the Committee of Commercialization and Economic Development, such as exists at the University of North Carolina at Chapel Hill. At the University of La Verne in California, the board addresses issues of environmental sustainably across its committees. The Facilities Committee discusses the university's efforts on LEED certified buildings, water resources and electrical usage. The Academic and Student Affairs Committee learn about new and novel curricular issues related to teaching the science and practice of sustainability, and the Finance Committee discusses issues of sustainable financial investment as well as the ROI on various capital expenses.

"Boards may need to develop new structures or revise their current ones to accommodate glocal issues.

*University of Pennsylvania Board of Trustees: Local, National, and Global Engagement Committee Charge*

Building on and incorporating the work of the former External Affairs and Neighborhood Initiatives Committees, the Local, National, and Global Engagement Committee supports the university in its efforts to foster the university’s presence, positive engagement and contributions at every level from our West Philadelphia neighborhoods to the global arena. Recognizing that international scholarly/academic initiatives are within the purview of the Academic Policy Committee, the Committee is concerned with how best to build on the university’s extensive international network of alumni, students, parents, faculty and friends to promote and effectively communicate Penn as a global leader in education, research, public policy, service and environmental responsibility.
Conclusion: elevating purpose
This chapter has asked and answered many questions that are arguably essential to governance in a
glocal context. However, it has yet to address what might be the most important but often unasked
question: For what purpose governance?

The common refrain regarding most problems with governance is that the roles and responsibilities
of governance participants – academic staff, administrators, trustees, the government – need to be
clarified (American Association of University Professors, 1995; AGB, 2015). More clarity equates with
better governance, goes the argument. An alternative view is that most problems arise not because
governance participants do not know what to do, but because they do not find the work meaningful
or engaging. Chait, Ryan and Taylor (2006) argue that purpose is what really matters to governance:

What if one of the central problems plaguing the board is not, in fact, uncertainty about its important roles
and responsibilities, but rather a lack of compelling purpose in the first place? We maintain that many
board members are ineffectual not just because they are confused about their role but because they are
dissatisfied with their role. They do not do the job well because the job does not strike them as worth doing
(Ibid, 15-16).

Nothing could be more challeng-
ing for university governance
when the members do not be-
lieve their efforts matter. Pur-
pose is essential for effective
governance. The question for boards in a glocal context is simply: For what purpose are we governing
this university as the world is changing? Asking such a question in the boardroom should sharpen the
focus and help boards craft their reason for governing. To do so in light of the university’s mission will
be powerful.

As the environment changes and the demands on universities evolve in ways that require a local and a
glocal focus and set of priorities, governing bodies will need to develop the mechanisms and skill to ad-
dress this question and the ones it spurs, and then to put their answer into practice. This is no small task.
